## 1. INTRODUCTION

This document describes the **L-Acoustics Drive System HTTP API** (later referred to as **HTTP API**), which is available on the following L-Acoustics electronics products:

| Amplified Controllers | Processors | Converters | Network |
|---|---|---|---|
| LA1.16i<br>LA7.16<br>LA7.16i<br>LA12X<br>LA4X<br>LA2Xi<br>LA8<br>LA4 | P1 | LC16D | LS10 |

The HTTP API allows third-party control systems to control and monitor L-Acoustics electronics products using standard HTTP requests over the local IP network.

## 2. PREREQUISITES

For using the HTTP API, the following requirements must be fulfilled:

- the L-Acoustics product runs firmware version 2.13.0 or later.

## 3. TERMINOLOGY

**HTTP API**
The L-Acoustics Drive System HTTP API subject of this document.

**API server**
Part of the L-Acoustics electronics product handling the HTTP API protocol and communication.

**API client**
Third-party device, application or system that consumes the HTTP API exposed by the API server.

**Device**
L-Acoustics electronics products exposing the HTTP server.

**JSON object**
Part of the JSON data model which contains other JSON objects or JSON properties.

**JSON property**
Part of the JSON data model which contains a single value of type string, number of boolean.

## 4. CONNECTIVITY

The HTTP API is available over the HTTP protocol on TCP port number 80:

```
http://<device-ip-address>/api/<endpoint>
```

The HTTP server does not support the HTTPS protocol.

For devices in Redundancy Network Mode, the HTTP server is available on primary and secondary network interfaces, using their respective IP addresses.

When contacting the HTTP server from a different subnet through an IP router, only the primary network interface can be used. In this situation the primary IP address, subnet mask and IP gateway must be correctly set on the device.

## 5. PERFORMANCE

The HTTP server can process a maximum of 10 concurrent HTTP client requests.
Requests exceeding this limit will fail and receive an error code.

The recommended minimum polling interval is 50 ms.

## 6. SECURITY AND HTTP AUTHENTICATION

The HTTP server offers the possibility to require authentication for HTTP clients and requests (as well as for accessing the Web configuration page when applicable).

The authentication method used by the HTTP server is the Digest access authentication[1] with a username and a password.

When authentication is enabled, only authenticated HTTP requests are accepted. Unauthenticated requests receive a 403 HTTP response code.
When authentication is disabled, regular unauthenticated HTTP requests are accepted.

HTTP authentication can be configured using **LA Device Scanner** utility.
On each device, the system administrator can enable or disable HTTP authentication, and modify the password.

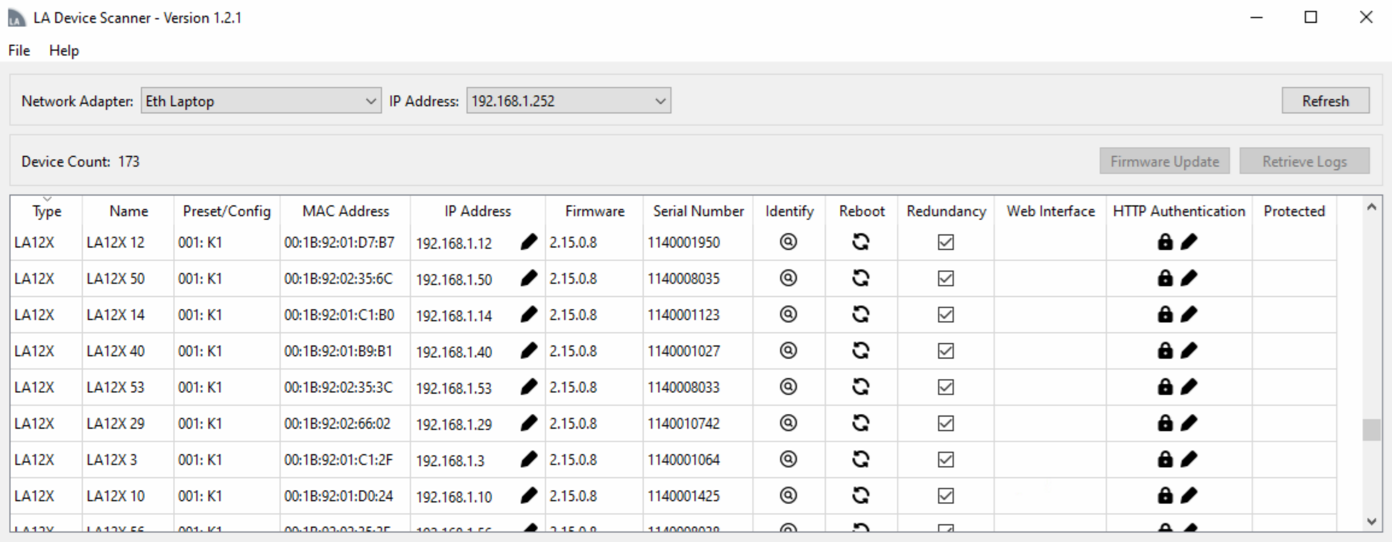
| **Devices** *(firmware 2.17.0)* | **Default HTTP authentication state** | **Default HTTP username** | **Default HTTP password** |
|---|---|---|---|
| LA7.16, LA12X, LA4X, LA8, LA4 | Enabled | admin | rest |
| LA1.16i, LA7.16i, LA2Xi, P1, LS10, LC16D | Disabled | admin | admin |

HTTP authentication settings persist when updating the device firmware.

In case the username or password is forgotten, resetting the device to factory defaults (through front panel or USB terminal) restores the default HTTP authentication settings, including username and password.

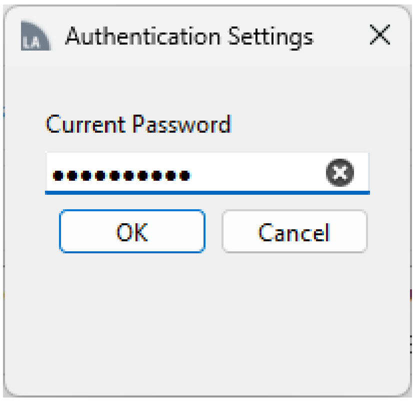
[1] Digest access authentication on Wikipedia

## Changing HTTP authentication settings with LA Device Scanner

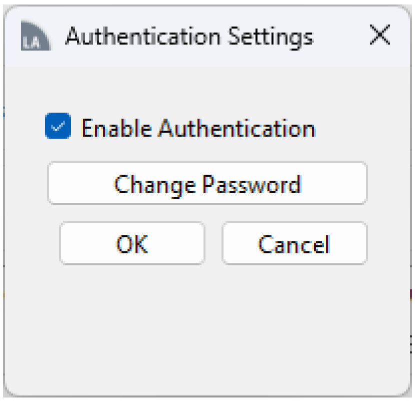


An open or closed padlock icon represents the state of HTTP authentication settings of compatible devices in the Authentication column in LA Device Scanner.

Click the Edit button then type the current HTTP API password.



HTTP authentication then can be enabled or disabled, and the password changed.



## 7. DATA FORMAT

The data exchanged between the HTTP client and the HTTP server is encoded in JSON format.

HTTP requests which contain a body must include the following HTTP headers:

```
Content-Length: <x>
```

where <x> is the length of the body.

Notes:

- Other HTTP headers, like `Host`, `User-Agent`, `Content-Type`, `Accept`, etc., may be included but are ignored by the HTTP server.
- The characters sequence `\r\n` (`\x0D\x0A` in hexadecimal) must be used as carriage return in the HTTP body.
- In GET and POST requests, the HTTP headers section must be followed by two carriage returns (`\r\n\r\n`).
  For GET request this ends the packet.
  For POST request, the request body follows.

***Example 1.1: POST request with a body***

HTTP POST request packet payload

```
POST /api/gpio/output/1 HTTP/1.1\r\n
Content-Length: 25\r\n
\r\n
{"state_select":"closed"}
```

***Example 1.2: Response to a GET request with a body***

HTTP GET request packet payload

```
GET /api/gpio/output/1/fault_select HTTP/1.1\r\n
\r\n
```

Response packet payload

```
HTTP/1.1 200 Ok\r\n
Content-Type: application/json\r\n
Content-Length: 114\r\n
Connection: close\r\n
\r\n
{"amp":false,"channel_temperature":false,"channel_error":false,"eth_link":false,"aes_lock":fa
lse,"avb_lock":false}
```

## 8. DATA STRUCTURE

The whole data model of the HTTP API is represented as a global JSON object.

***Example 2.1: full data model***

Request

```
GET /api
```

Response body

```
{
  "info": {
    "name": "LA7.16i",
    "firmware_version": "2.13.0.5",
    "firmware_tag": "",
    "firmware_date": "20230127",
    "serial": "1680000017",
    "mac": "00:1b:92:05:04:2d",
    "avdecc_entity_id": "0x001b92ffff05042d"
  },
  "network": {
    "redundancy": {
      "select": true,
      "active": true
    },
    "ip": {
      "active": {
        "primary": {
          "address": "192.168.101.46",
          "netmask": "255.255.255.0",
          "gateway": "0.0.0.0"
        },
        "secondary": {
          "address": "192.168.102.46",
          "netmask": "255.255.255.0",
          "gateway": "0.0.0.0"
        }
      },
      "select": null
    }
  },
  "ptp": {
    "primary": {
      "gm_id": "0x001b92fffe05002d",
      "priority1": 248,
...
```

A request can target a specific endpoint in the data model.

- If the endpoint is an object or array, the response contains all the children of this object or array.
- If the endpoint is a property, the response contains the value of that property.

***Example 2.2: response to a GET request on an object***

Request

```
GET /api/info
```

Response body

```
{
  "name": "LA7.16i",
  "firmware_version": "2.13.0.5",
  "firmware_tag": "",
  "firmware_date": "20230127",
  "serial": "1680000017",
  "mac": "00:1b:92:05:04:2d",
  "avdecc_entity_id": "0x001b92ffff05042d"
}
```

***Example 2.3: response to a GET request on an array***

Request

```
GET /api/gpio/pin
```

Response body

```
[
  {
    "index": 1,
    "direction": "output",
    "state": true
  },
  {
    "index": 2,
    "direction": "output",
    "state": true
  },
  {
    "index": 3,
    "direction": "output",
    "state": false
  }
]
```

*Example 2.4: response to a GET request on the item of an array*

| Request |
|---|
| `GET /api/gpio/pin/2` |
| Response body |

```
{
  "index": 2,
  "direction": "output",
  "state": true
}
```

*Example 2.5: response to a GET request on a property*

| Request |
|---|
| `GET /api/power/standby` |
| Response body |

```
true
```

## 9. UPDATING DATA

Some properties in the data model can be updated using POST requests.

The response body to POST requests contains the updated data model.

***Example 3.1: updating a single property***

Request 1

```
GET /api/power/standby
```

Response body

```
true
```

Request 2

```
POST /api/power/standby
```

Request body

```
false
```

Response body

```
false
```

Request 3

```
GET /api/power/standby
```

Response body

```
false
```

If a POST request contains an object, the HTTP service tries to update each writable property contained in the body.

Incorrect values or read-only properties are ignored by the HTTP server.

***Example 3.2: updating multiple properties in an object***

Request 1 (to read the current data model)

```
GET /api/ptp/primary
```

Response body

```
{
  "gm_id": "0x001b92fffe05002d",    (read-only)
  "priority1": 248,
  "priority2": 248,
  "as_path_length": 3    (read-only)
}
```

Request 2 (to update the data model)

```
POST /api/ptp
```

Request body

```
{
  "priority1": 200,
  "priority2": 210,
  "as_path_length": 300    (read-only, value ignored)
}
```

Response body (response code 200)

```
{
  "gm_id": "0x001b92fffe05002d",    (read-only)
  "priority1": 200,
  "priority2": 210,
  "as_path_length": 3    (read-only)
}
```

## 10. ACTIVE/SELECT PAIRS

Some settings have two distinct properties:

- one “`active`” property for reading,
- one “`select`” property for writing.

The data model contained in the POST request targeting the “`select`” property must match the data model format returned by the “`active`” property.

***Example 4.1: active/select pair of network redundancy***

Request 1 (to read the current data model)

```
GET /api/network/redundancy
```

Response body

```
{
  "select": true,
  "active": true    (read-only)
}
```

Request 2 (to update the data model)

```
POST /api/network/redundancy/select
```

Request body

```
false
```

Response body

```
false
```

Request 3 (to read the updated data model)

```
GET /api/network/redundancy
```

Response body

```
{
  "select": false,
  "active": true    (read-only, will be updated after reboot)
}
```

***Example 4.2: active/select pair of network IP settings***

Request 1 (to read the current data model)

```
GET /api/network/ip/active
```

Response body

```
{
  "primary": {
    "address": "192.168.1.100",
    "netmask": "255.255.255.0",
    "gateway": "0.0.0.0"
  },
  "secondary": {
    "address": "192.168.2.100",
    "netmask": "255.255.255.0",
    "gateway": "0.0.0.0"
  }
}
```

Request 2 (to update the data model)

```
POST /api/network/ip/select
```

Request body

```
{
  "primary": {
    "address": "172.16.10.30",
    "netmask": "255.255.0.0",
    "gateway": "0.0.0.0"
  },
  "secondary": {
    "address": "172.17.10.30",
    "netmask": "255.255.0.0",
    "gateway": "0.0.0.0"
  }
}
```

Response body (response code 204, no content)

*(the IP settings are changed instantly)*

## List of active/select pairs

| Endpoint | Data description |
|---|---|
| `/api/network/redundancy` | Update the network redundancy mode. Reboot is required. |
| `/api/network/ip` | Update the IP settings.<br>Applied instantly, network connectivity may be broken when updating IP settings. |
| `/api/input/source/<i>` | Select “avb” or “aux” as input source for each channel.<br><i> is the channel index and depends on the platform. |

## 11. ACTIONS

Some endpoints in the data model are dedicated for triggering actions instead of exposing data.

Triggering an action is done by sending a POST request to its exact endpoint.
If the action does not require input data, the body of the request is ignored.

Action endpoints return a value of `null`.

***Example 5.1: triggering reboot action***

| Request |
|---|
| `POST /api/power/reboot` |
| **Response** |
| `Code 204: No content` |

### List of actions

| Endpoint | Input data | Action description |
|---|---|---|
| `/api/input/fallback/avb/sink/<i>/test` | No | Trigger fallback to AUX for AVB input stream `<i>` |
| `/api/input/fallback/avb/sink/<i>/clear` | No | Reset fallback for AVB input stream `<i>` |
| `/api/power/reboot` | No | Reboot the device |
| `/api/configuration/load` | (Number)<br>(configuration index) | Load a configuration |
| `/api/configuration/store` | (Number)<br>(configuration index) | Store a configuration |
| `/api/layout/load_user_layout` | (Number)<br>(user layout index) | Load a user layout |
| `/api/layout/load_factory_layout` | (Number)<br>(factory layout index) | Load a factory layout |
| `/api/layout/save` | (Number)<br>(user layout index) | Save a user layout |

## 12. AMPLIFIED CONTROLLER OUTPUTS DRIVING ACTIVE ENCLOSURES

Amplified controllers may drive active enclosures (multiple ways enclosures) using more than one consecutive outputs. For instance, all four outputs of an LA12X could drive K2 enclosures.

In that situation, the following output parameters shall never be set to different values on output channels jointly driving active enclosures:

- gain,
- delay,
- polarity.

The HTTP server automatically propagates the values received for these parameters to all outputs driving the same enclosure.

As a consequence:

- the HTTP client does not need to send these parameters to all outputs driving an active enclosure - one output is enough,
- if distinct parameter values are sent to the outputs driving an active enclosure, the last received value overwrites the previous ones on all outputs for each parameter.

Note:
L-Acoustics active enclosures include:

- K1
- K2
- K3
- Kara II
- L2
- L2D
- X15 HiQ
- Syva Low/Syva
- Subwoofers in cardioid patterns

## 13. HTTP REQUEST EXAMPLES

### Putting the device in standby mode

Request

```
POST /api/power/standby
```

Request body

```
true
```

### Rebooting the device

Request

```
POST /api/power/reboot
```

Request body

```
true
```

### Recalling a configuration

Request

```
POST /api/configuration/load
```

Request body

```
{"index":3}
```

### Reading all output levels

Request

```
GET /api/level/dsp/output
```

### Muting output 2 on an amplified controller

| Request |
| --- |
| `POST /api/control/dsp/output/2/mute` |
| **Request body** |
| `true` |

### Unmuting output 13 on a 16-channel amplified controller

| Request |
| --- |
| `POST /api/control/dsp/output/13/mute` |
| **Request body** |
| `false` |

### Muting all outputs on 4-channel amplified controllers

| Request |
| --- |
| `POST /api/control/dsp/output` |
| **Request body** |
| `[{“mute”:true},{“mute”:true},{“mute”:true},{“mute”:true}]` |

### Unmuting all outputs on 16-channel amplified controllers

Request

```
POST /api/control/dsp/output
```

Request body

```
[
  {“mute”:false},{“mute”:false},{“mute”:false},{“mute”:false},
  {“mute”:false},{“mute”:false},{“mute”:false},{“mute”:false},
  {“mute”:false},{“mute”:false},{“mute”:false},{“mute”:false},
  {“mute”:false},{“mute”:false},{“mute”:false},{“mute”:false}
]
```

### Changing the gain of a selection of outputs on 16-channel amplified controllers

| Request |
|---|
| `POST /api/control/dsp/gain` |

| Request body |
|---|

```
[
  {“gain”:-6.0},
  {“gain”:-6.0},
  {“gain”:-9.0},
  {},
  {},
  {},
  {“gain”:-12.0},
  {“gain”:-12.0},
  {“gain”:0.0},
  {“gain”:0.0},
  {“gain”:-40.0},
  {“gain”:-40.0},
  {“gain”:-40.0},
  {“gain”:-40.0},
  {},
  {}
]
```

### Updating a combination of mute and gain values on 16-channel amplified controllers

Request

```
POST /api/control/dsp/gain
```

Request body

```
[
  {“mute”:false,“gain”:-6.0},
  {“mute”:false,“gain”:-6.0},
  {“mute”:false,“gain”:-9.0},
  {“mute”:true},
  {“mute”:true},
  {“mute”:true},
  {“mute”:false,“gain”:-12.0},
  {“mute”:false,“gain”:-12.0},
  {“mute”:false,“gain”:0.0},
  {“mute”:false,“gain”:0.0},
  {“mute”:false,“gain”:-40.0},
  {“mute”:false,“gain”:-40.0},
  {“mute”:false,“gain”:-40.0},
  {“mute”:false,“gain”:-40.0},
  {“mute”:true},
  {“mute”:true}
]
```

## 14. API REFERENCE

This API reference was generated using L-Acoustics Drive System firmware version **2.17.0.8**.

## Additions since previous documentation version 1.7 (firmware 2.16.0.14)

### LA1.16i

```
All API (new device)
```

### LA7.16i

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

/aes67/reset_counters (action, write-only)
        Description: Reset aes67 counters.
        Input: {
                "type": <type: enum>,
                        Values: "input", "output"
                "index": <type: uint>,
                        Range: 1..16
                "network": <type: enum>
                        Values: "primary", "secondary"
        }

/aes67/input/audio_stream/<i>/primary/status/counters/unsupported_format (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/early_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/unsupported_format (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/early_timestamp (read-only)
        Type: int
```

### LA7.16

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int
```

### LA12X

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int
```

### LA4X

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int
```

### LA2Xi

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

/aes67/reset_counters (action, write-only)
        Description: Reset aes67 counters.
        Input: {
                "type": <type: enum>,
                        Values: "input", "output"
                "index": <type: uint>,
                        Range: 1..1
                "network": <type: enum>
                        Values: "primary", "secondary"
        }

/aes67/input/audio_stream/<i>/primary/status/counters/unsupported_format (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/early_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/unsupported_format (read-only)
        Type: int
```

### LA2Xi

```
/aes67/input/audio_stream/<i>/secondary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/early_timestamp (read-only)
        Type: int
```

### LA4 / LA8

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/temperature (read-only)
        Type: int
```

### P1

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/monitor/probe/connected (read-only)
        Type: boolean

/monitor/probe/humidity (read-only)
        Type: type_percent

/monitor/probe/temperature (read-only)
        Type: int
```

### LS10

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"
```

### LC16D

```
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"
```

### LC16D

```
/monitor/temperature (read-only)
        Type: int

/clock/source/type_when_gm_in_aes67 (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "wc", "madi", "aes"

/clock/source/type_current (read-only)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "wc", "madi", "aes", "ptp"

/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

/aes67/reset_counters (action, write-only)
        Description: Reset aes67 counters.
        Input: {
                "type": <type: enum>,
                        Values: "input", "output"
                "index": <type: uint>,
                        Range: 1..16
                "network": <type: enum>
                        Values: "primary", "secondary"
        }

/aes67/input/audio_stream/<i>/primary/status/counters/unsupported_format (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/primary/status/counters/early_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/unsupported_format (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/late_timestamp (read-only)
        Type: int

/aes67/input/audio_stream/<i>/secondary/status/counters/early_timestamp (read-only)
        Type: int
```

# LA1.16i

## LA1.16i

```
----------------------------------------
  /info
----------------------------------------
/info/name (read-only)
        Description: Device name (e.g., LA4X)
        Type: string

/info/firmware_version (read-only)
        Description: Firmware package version.
        Type: string

/info/firmware_tag (read-only)
        Description: Firmware package tag
        Type: string

/info/firmware_date (read-only)
        Description: Firmware package date.
        Type: string

/info/serial (read-only)
        Description: Device serial number.
        Type: string

/info/mac (read-only)
        Description: MAC address of the network host.
        Type: type_mac (pattern = MAC address (e.g. 00:1B:92:12:34:EF))

/info/unit_name (read-write)
        Description: Unit name
        Type: string

/info/unit_name_auto (read-only)
        Description: TRUE if unit name is managed automatically.
        Type: boolean

/info/datetime (read-write)
        Description: Current system date and time (ISO-8601).
        Type: string

----------------------------------------
  /network/redundancy
----------------------------------------
/network/redundancy/select (read-write)
        Type: boolean

/network/redundancy/active (read-only)
        Type: boolean

----------------------------------------
  /network/ip
----------------------------------------
/network/ip/select (action, write-only)
        Description: Select IP settings.
        Input: {
                "primary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                },
                "secondary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                }
        }

----------------------------------------
  /network/ip/active/primary
```

## LA1.16i

```
----------------------------------------
/network/ip/active/primary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /network/ip/active/secondary
----------------------------------------
/network/ip/active/secondary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/secondary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/secondary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /network/audio
----------------------------------------
/network/audio/active (read-only)
        Type: type_enum_audio_mode
        Values: "AVB", "AES67"

----------------------------------------
  /avdecc
----------------------------------------
/avdecc/lock (read-only)
        Type: boolean

/avdecc/entity_id (read-only)
        Description: Entity ID of this AVB entity.
        Type: type_hex (pattern = 0x[0-9A-F]+)

----------------------------------------
  /hmi
----------------------------------------
/hmi/identify (read-write)
        Type: boolean

/hmi/intensity (read-write)
        Description: Display led or backlight intensity.
        Type: enum
        Values: "OFF", "LOW", "MEDIUM", "NORMAL", "HIGH"

----------------------------------------
  /ptp
----------------------------------------
/ptp/ptpv2_domain (read-write)
        Description: PTPv2 domain.
        Type: uint

----------------------------------------
  /ptp/primary
----------------------------------------
/ptp/primary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/primary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/primary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint
```

**LA1.16i**

```
/ptp/primary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /ptp/secondary
----------------------------------------
/ptp/secondary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/secondary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/secondary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/secondary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"

----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"

/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"
```

**LA1.16i**

```
/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean

----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
        Type: uint

/bridge/streams/used (read-only)
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
```

## LA1.16i

```
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /input
----------------------------------------
/input/source/<i>/channel (read-only)
        Type: uint
        Range: 1..16

/input/source/<i>/select (read-write)
        Description: Select input source
        Type: enum
        Values: "network", "aux"

/input/source/<i>/active (read-only)
        Description: Active input source
        Type: enum
        Values: "network", "aux"

----------------------------------------
  /input/fallback/network
----------------------------------------
/input/fallback/network/channel/<i>/index (read-only)
        Type: uint
        Range: 1..16

/input/fallback/network/channel/<i>/enable (read-write)
        Description: Enable fallback feature
        Type: boolean

/input/fallback/network/channel/<i>/active (read-only)
        Description: Current fallback state
        Type: boolean

/input/fallback/network/sink/<i>/test (action, write-only)
        Description: Trigger (test) fallback

/input/fallback/network/sink/<i>/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/network/sink/<i>/index (read-only)
        Type: uint
        Range: 1..16
```

## LA1.16i

```
----------------------------------------
  /input/aux
----------------------------------------
/input/aux/channel/<i>/input (read-only)
        Type: uint
        Range: 1..16

/input/aux/channel/<i>/value (read-write)
        Type: enum
        Values: "A", "B"

----------------------------------------
  /input/aux/ana
----------------------------------------
/input/aux/ana/gain (read-write)
        Description: Gain applied on the AUX input signal when in ANA mode (in dB)
        Type: type_dB
        Range: -12.0..12.0

----------------------------------------
  /input/aux/mode
----------------------------------------
/input/aux/mode/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/aux/mode/active (read-only)
        Type: enum
        Values: "ana", "aes"

----------------------------------------
  /routing
----------------------------------------
/routing/output/<i>/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/routing/output/<i>/input/<i>/enable (read-write)
        Description: Enable input channel.
        Type: boolean

/routing/output/<i>/input/<i>/invert (read-write)
        Description: Invert channel polarity.
        Type: boolean

/routing/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
```

## LA1.16i

```
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz", 
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

----------------------------------------
  /aes/input/<i>/src
----------------------------------------
/aes/input/<i>/src/enable (read-write)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
        Range: 1..1

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/standby (read-write)
        Description: Standby mode
        Type: boolean

/power/mode_req_source (read-write)
        Description: Last mode request source
        Type: enum
        Values: "unknown", "external", "mon", "error"

/power/autostandby_mode (read-write)
        Description: Autostandby mode
        Type: enum
        Values: "off", "auto_standby", "auto_stanby_wakeup"

/power/autostandby_timeout (read-write)
        Description: Timeout duration for automatic standby (in seconds)
        Type: int
        Range: 1..3600

/power/autostandby_threshold (read-write)
        Description: Input level threshold for automatic standby (in dB)
        Type: int
        Range: -60..0

----------------------------------------
  /power/status
----------------------------------------
/power/status/smps/<i>/index (read-only)
        Type: uint
        Range: 1..2

/power/status/smps/<i>/state (read-only)
        Type: boolean

/power/status/inp24v (read-only)
        Type: boolean
```

## LA1.16i

```
----------------------------------------
  /gpio
----------------------------------------
/gpio/pin/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/pin/<i>/direction (read-write)
        Description: Pin direction.
        Type: enum
        Values: "input", "output"

/gpio/pin/<i>/state (read-only)
        Description: Pin state
        Type: boolean

/gpio/input/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/input/<i>/state (read-only)
        Description: Pin state.
        Type: type_enum_low_high
        Values: "low", "high"

/gpio/input/<i>/function_low (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"

/gpio/input/<i>/function_high (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"

/gpio/input/<i>/config_slot_a (read-write)
        Description: Select slot of configuration A.
        Type: uint
        Range: 1..10

/gpio/input/<i>/config_slot_b (read-write)
        Description: Select slot of configuration B.
        Type: uint
        Range: 1..10

/gpio/input/<i>/error (read-only)
        Description: Input function error.
        Type: bits

----------------------------------------
  /gpio/output/<i>/fault_select
----------------------------------------
/gpio/output/<i>/fault_select/amp (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/channel_temperature (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/channel_error (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/eth_link (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/aes_lock (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/stream_lock (read-write)
        Type: boolean
```

**LA1.16i**

```
----------------------------------------
  /gpio/output/<i>/eth_link_select
----------------------------------------

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.
        Type: boolean

/en54/output/<i>/lf (read-only)
        Description: LF channels to be tested.
        Type: boolean

/en54/output/<i>/open_circuit_hf (read-only)
        Description: Speaker or cable disconnection (HF).
        Type: boolean

/en54/output/<i>/open_circuit_lf (read-only)
        Description: Speaker or cable disconnection (LF).
        Type: boolean

/en54/output/<i>/short_circuit_hf (read-only)
        Description: Speaker or cable short circuit (HF).
        Type: boolean

/en54/output/<i>/short_circuit_lf (read-only)
        Description: Speaker or cable short circuit (LF).
        Type: boolean

/en54/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/en54/input/<i>/monitor (read-only)
        Type: boolean
```

## LA1.16i

```
/en54/input/<i>/pilot_tone_error (read-only)
        Description: Pilot tone monitoring enabled but not detected.
        Type: boolean

/en54/enable (read-only)
        Description: Enable EN54 system monitoring.
        Type: boolean

/en54/options (read-only)
        Type: enum
        Values: "PILOT_TONE", "AES_LOCK", "AES_AUDIO", "SPEAKER", "STREAM_LOCK"

/en54/period (read-only)
        Description: The speaker check refresh period (in sec).
        The maximum period is limited to 60 seconds as defined by EN54-16.

        Type: uint
        Range: 1..58

/en54/state (read-only)
        Description: EN54 global error indication.
        Type: enum
        Values: "ok", "error"

----------------------------------------
  /en54/pilot_tone
----------------------------------------
/en54/pilot_tone/frequency (read-only)
        Description: Expected pilot tone frequency (in Hz). default = 21kHz
        Type: uint
        Range: 10..22000

/en54/pilot_tone/threshold (read-only)
        Description: Pilot tone detection threshold (in 0.1 dBFS). default = -60dBFs
        Type: int
        Range: -1200..0

/en54/pilot_tone/resolution (read-only)
        Description: Pilot tone frequency resolution (in Hz). default = 100Hz
        Type: uint
        Range: 10..1000

----------------------------------------
  /en54/siggen/hf
----------------------------------------
/en54/siggen/hf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/hf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/hf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/hf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/hf/taps (read-only)
        Description: GFT size (samples).
        Type: uint
        Range: 64..32768
```

## LA1.16i

```
----------------------------------------
  /en54/siggen/lf
----------------------------------------
/en54/siggen/lf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/lf/gain (read-only)

        Type: boolean

/monitor/output/<i>/limit (read-only)
        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"

/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "ptp"
```

## LA1.16i

```
/clock/source/audio_stream (read-write)
        Description: AVB audio input stream used as clock source.
        Type: uint
        Range: 1..16

/clock/source/selected_ptp_clock (read-only)
        Description: PTPv2 clock used for mediaclock (redundancy only).
        Type: int
        Range: 0..1

----------------------------------------
  /clock/status/ptp
----------------------------------------
/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..96000

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..16

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..16

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
```

## LA1.16i

```
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

----------------------------------------------
  /avb/input/audio_stream/<i>/primary/status
----------------------------------------------
/avb/input/audio_stream/<i>/primary/status/report (read-only)
        Type: avb_input_status_report
        Values: "IDLE", "ERROR", "CONNECTING", "CONNECTED", "SYNC"

/avb/input/audio_stream/<i>/primary/status/error (read-only)
        Type: avb_input_status_error
        Values: "NONE", "TIMEOUT", "CONNECTION", "RESERVATION", "DATA"

/avb/input/audio_stream/<i>/primary/status/connection_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/primary/status/reservation_fault (read-only)
        Type: uint

-----------------------------------------
  /avb/input/audio_stream/<i>/secondary
-----------------------------------------
/avb/input/audio_stream/<i>/secondary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/secondary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

------------------------------------------------
  /avb/input/audio_stream/<i>/secondary/status
------------------------------------------------
/avb/input/audio_stream/<i>/secondary/status/report (read-only)
        Type: avb_input_status_report
        Values: "IDLE", "ERROR", "CONNECTING", "CONNECTED", "SYNC"

/avb/input/audio_stream/<i>/secondary/status/error (read-only)
        Type: avb_input_status_error
```

### LA1.16i

```
        Values: "NONE", "TIMEOUT", "CONNECTION", "RESERVATION", "DATA"

/avb/input/audio_stream/<i>/secondary/status/connection_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/secondary/status/reservation_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/index (read-only)
        Type: uint
        Range: 1..16

/avb/input/audio_stream/<i>/status (read-only)
        Description: Input state
        Type: stream_status
        Values: "IDLE", "ERROR", "WARNING", "OK"

----------------------------------------
  /avb/input/clock_stream
----------------------------------------
/avb/input/clock_stream/status (read-only)
        Description: Input state
        Type: stream_status
        Values: "IDLE", "ERROR", "WARNING", "OK"

----------------------------------------
  /avb/input/clock_stream/format
----------------------------------------
/avb/input/clock_stream/format/raw (read-only)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

----------------------------------------
  /avb/input/clock_stream/primary
----------------------------------------
/avb/input/clock_stream/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error", 
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

        Description: Current fallback state
        Type: boolean

/input/fallback/network/sink/<i>/test (action, write-only)
        Description: Trigger (test) fallback

/input/fallback/network/sink/<i>/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/network/sink/<i>/index (read-only)
        Type: uint
        Range: 1..16
```

## LA7.16i

```
----------------------------------------
  /input/aux
----------------------------------------
/input/aux/channel/<i>/input (read-only)
        Type: uint
        Range: 1..16

/input/aux/channel/<i>/value (read-write)
        Type: enum
        Values: "A", "B"

----------------------------------------
  /input/aux/ana
----------------------------------------
/input/aux/ana/gain (read-write)
        Description: Gain applied on the AUX input signal when in ANA mode (in dB)
        Type: type_dB
        Range: -12.0..12.0

----------------------------------------
  /input/aux/mode
----------------------------------------
/input/aux/mode/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/aux/mode/active (read-only)
        Type: enum
        Values: "ana", "aes"

----------------------------------------
  /routing
----------------------------------------
/routing/output/<i>/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/routing/output/<i>/input/<i>/enable (read-write)
        Description: Enable input channel.
        Type: boolean

/routing/output/<i>/input/<i>/invert (read-write)
        Description: Invert channel polarity.
        Type: boolean

/routing/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
```

## LA7.16i

```
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz",
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
        Range: 1..1

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/standby (read-write)
        Description: Standby mode
        Type: boolean

----------------------------------------
  /power/status
----------------------------------------
/power/status/inp24v (read-only)
        Type: boolean

/power/status/smps (read-only)
        Type: boolean

----------------------------------------
  /gpio
----------------------------------------
/gpio/pin/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/pin/<i>/direction (read-write)
        Description: Pin direction.
        Type: enum
        Values: "input", "output"

/gpio/pin/<i>/state (read-only)
        Description: Pin state
        Type: boolean

/gpio/input/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/input/<i>/state (read-only)
        Description: Pin state.
        Type: type_enum_low_high
        Values: "low", "high"

/gpio/input/<i>/function_low (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"
```

## LA7.16i

```
/gpio/input/<i>/function_high (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"

/gpio/input/<i>/config_slot_a (read-write)
        Description: Select slot of configuration A.
        Type: uint
        Range: 1..10

/gpio/input/<i>/config_slot_b (read-write)
        Description: Select slot of configuration B.
        Type: uint
        Range: 1..10

/gpio/input/<i>/error (read-only)
        Description: Input function error.
        Type: bits

----------------------------------------
  /gpio/output/<i>/fault_select
----------------------------------------
/gpio/output/<i>/fault_select/amp (read-write)
        Type: boolean

        Type: boolean

---------------------------------------------
  /gpio/output/<i>/clock_stream_lock_select
---------------------------------------------
/gpio/output/<i>/clock_stream_lock_select/sink_1 (read-write)
        Type: boolean

/gpio/output/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/output/<i>/state (read-only)
        Description: Current output pin opened.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/function (read-write)
        Description: Select output pin function.
        Type: type_enum_gpo_func
        Values: "none", "state", "fault", "alive", "eth_link", "en54", "aes_lock", "stream_lock"

/gpio/output/<i>/state_select (read-write)
        Description: Select output pin state.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/alive_period (read-write)
        Description: Select alive signaling period (in sec).
        Type: uint
        Range: 1..60

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
```

## LA7.16i

```
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.
        Type: boolean

/en54/output/<i>/lf (read-only)
        Description: LF channels to be tested.
        Type: boolean

/en54/output/<i>/open_circuit_hf (read-only)
        Description: Speaker or cable disconnection (HF).
        Type: boolean

/en54/output/<i>/open_circuit_lf (read-only)
        Description: Speaker or cable disconnection (LF).
        Type: boolean

/en54/output/<i>/short_circuit_hf (read-only)
        Description: Speaker or cable short circuit (HF).
        Type: boolean

/en54/output/<i>/short_circuit_lf (read-only)
        Description: Speaker or cable short circuit (LF).
        Type: boolean

/en54/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/en54/input/<i>/monitor (read-only)
        Type: boolean

/en54/input/<i>/pilot_tone_error (read-only)
        Description: Pilot tone monitoring enabled but not detected.
        Type: boolean

/en54/enable (read-only)
        Description: Enable EN54 system monitoring.
        Type: boolean

/en54/options (read-only)
        Type: enum
        Values: "PILOT_TONE", "AES_LOCK", "AES_AUDIO", "SPEAKER", "STREAM_LOCK"

/en54/period (read-only)
        Description: The speaker check refresh period (in sec).
        The maximum period is limited to 60 seconds as defined by EN54-16.

        Type: uint
        Range: 1..58

/en54/state (read-only)
        Description: EN54 global error indication.
        Type: enum
```

## LA7.16i

```
        Values: "ok", "error"

----------------------------------------
  /en54/pilot_tone
----------------------------------------
/en54/pilot_tone/frequency (read-only)
        Description: Expected pilot tone frequency (in Hz). default = 21kHz
        Type: uint
        Range: 10..22000

/en54/pilot_tone/threshold (read-only)
        Description: Pilot tone detection threshold (in 0.1 dBFS). default = -60dBFs
        Type: int
        Range: -1200..0

/en54/pilot_tone/resolution (read-only)
        Description: Pilot tone frequency resolution (in Hz). default = 100Hz
        Type: uint
        Range: 10..1000

----------------------------------------
  /en54/siggen/hf
----------------------------------------
/en54/siggen/hf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/hf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/hf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/hf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/hf/taps (read-only)
        Description: GFT size (samples).
        Type: uint

        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/monitor/fuse_protect (read-only)
        Description: Fuseprotect indication (global flag).
        Type: enum
        Values: "ok", "limiting"

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "ptp"

/clock/source/audio_stream (read-write)
        Description: AVB audio input stream used as clock source.
        Type: uint
        Range: 1..16

/clock/source/selected_ptp_clock (read-only)
        Description: PTPv2 clock used for mediaclock (redundancy only).
        Type: int
        Range: 0..1

----------------------------------------
  /clock/status/ptp
----------------------------------------
/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"
```

## LA7.16i

```
----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..96000

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..16

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..16

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint
```

## LA7.16i

```
---------------------------------------
  /avb/input/audio_stream/<i>/primary
---------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

## LA7.16

```
        Type: boolean

/hmi/option/confirm/unmute (read-write)
        Type: boolean

----------------------------------------
  /ptp
----------------------------------------
/ptp/ptpv2_domain (read-write)
        Description: PTPv2 domain.
        Type: uint

----------------------------------------
  /ptp/primary
----------------------------------------
/ptp/primary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/primary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/primary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/primary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /ptp/secondary
----------------------------------------
/ptp/secondary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/secondary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/secondary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/secondary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"
```

## LA7.16

```
----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"

/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"

/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
```

## LA7.16

```
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean

----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
        Type: uint

/bridge/streams/used (read-only)
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /input
----------------------------------------
/input/source/<i>/channel (read-only)
        Type: uint
        Range: 1..16

/input/source/<i>/select (read-write)
        Description: Select input source
        Type: enum
        Values: "network", "aux"

/input/source/<i>/active (read-only)
        Description: Active input source
        Type: enum
        Values: "network", "aux"
```

## LA7.16

```
----------------------------------------
  /input/fallback/network
----------------------------------------
/input/fallback/network/channel/<i>/index (read-only)
        Type: uint
        Range: 1..16

/input/fallback/network/channel/<i>/enable (read-write)
        Description: Enable fallback feature
        Type: boolean

/input/fallback/network/channel/<i>/active (read-only)
        Description: Current fallback state
        Type: boolean

/input/fallback/network/sink/<i>/test (action, write-only)
        Description: Trigger (test) fallback

/input/fallback/network/sink/<i>/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/network/sink/<i>/index (read-only)
        Type: uint
        Range: 1..16

----------------------------------------
  /input/aux
----------------------------------------
/input/aux/channel/<i>/input (read-only)
        Type: uint
        Range: 1..16

/input/aux/channel/<i>/value (read-write)
        Type: enum
        Values: "A", "B"

----------------------------------------
  /input/aux/ana
----------------------------------------
/input/aux/ana/gain (read-write)
        Description: Gain applied on the AUX input signal when in ANA mode (in dB)
        Type: type_dB
        Range: -12.0..12.0

----------------------------------------
  /input/aux/mode
----------------------------------------
/input/aux/mode/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/aux/mode/active (read-only)
        Type: enum
        Values: "ana", "aes"

----------------------------------------
  /routing
----------------------------------------
/routing/output/<i>/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/routing/output/<i>/input/<i>/enable (read-write)
        Description: Enable input channel.
        Type: boolean

/routing/output/<i>/input/<i>/invert (read-write)
        Description: Invert channel polarity.
        Type: boolean
```

## LA7.16

```
/routing/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz",
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
        Range: 1..1

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/standby (read-write)
        Description: Standby mode
        Type: boolean

----------------------------------------
  /power/status
----------------------------------------
/power/status/inp24v (read-only)
        Type: boolean

/power/status/smps (read-only)
        Type: boolean

----------------------------------------
  /gpio
----------------------------------------
/gpio/pin/<i>/index (read-only)
```

## LA7.16

```
        Type: uint
        Range: 1..3

/gpio/pin/<i>/direction (read-write)
        Description: Pin direction.
        Type: enum
        Values: "input", "output"

/gpio/pin/<i>/state (read-only)
        Description: Pin state
        Type: boolean

/gpio/input/<i>/index (read-only)
        Type: uint
        Range: 1..3

/gpio/input/<i>/state (read-only)
        Description: Pin state.
        Type: type_enum_low_high
        Values: "low", "high"

/gpio/input/<i>/function_low (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"

/gpio/input/<i>/function_high (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next",
"load_config_previous", "standby", "wakeup", "standby_wakeup", "gain_up", "gain_down"

/gpio/input/<i>/config_slot_a (read-write)
        Description: Select slot of configuration A.
        Type: uint
        Range: 1..10

/gpio/input/<i>/config_slot_b (read-write)
        Description: Select slot of configuration B.
        Type: uint
        Range: 1..10

/gpio/input/<i>/error (read-only)
        Description: Input function error.
        Type: bits

----------------------------------------
  /gpio/output/<i>/fault_select
----------------------------------------
/gpio/output/<i>/fault_select/amp (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/channel_temperature (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/channel_error (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/eth_link (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/aes_lock (read-write)
        Type: boolean

/gpio/output/<i>/fault_select/stream_lock (read-write)
        Type: boolean

----------------------------------------
  /gpio/output/<i>/eth_link_select
----------------------------------------
```

## LA7.16

```
/gpio/output/<i>/eth_link_select/port_1 (read-write)
        Type: boolean

/gpio/output/<i>/eth_link_select/port_2 (read-write)
        Type: boolean

----------------------------------------
  /gpio/output/<i>/aes_lock_select
----------------------------------------
/gpio/output/<i>/aes_lock_select/aes_1 (read-write)
        Type: boolean

---------------------------------------------
  /gpio/output/<i>/audio_stream_lock_select
---------------------------------------------
/gpio/output/<i>/audio_stream_lock_select/sink_1 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_2 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_3 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_4 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_5 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_6 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_7 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_8 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_9 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_10 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_11 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_12 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_13 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_14 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_15 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_16 (read-write)
        Type: boolean

---------------------------------------------
  /gpio/output/<i>/clock_stream_lock_select
---------------------------------------------
/gpio/output/<i>/clock_stream_lock_select/sink_1 (read-write)
        Type: boolean

/gpio/output/<i>/index (read-only)
        Type: uint
```

## LA7.16

```
        Range: 1..3

/gpio/output/<i>/state (read-only)
        Description: Current output pin opened.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/function (read-write)
        Description: Select output pin function.
        Type: type_enum_gpo_func
        Values: "none", "state", "fault", "alive", "eth_link", "en54", "aes_lock", "stream_lock"

/gpio/output/<i>/state_select (read-write)
        Description: Select output pin state.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/alive_period (read-write)
        Description: Select alive signaling period (in sec).
        Type: uint
        Range: 1..60

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------
  /configuration/active
----------------------------------------
/configuration/active/index (read-only)
        Type: uint
        Range: 0..10

----------------------------------------
```

## LA7.16

```
  /level/dsp
----------------------------------------
/level/dsp/input/<i>/index (read-only)
        Type: uint
        Range: 1..16

/level/dsp/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

/level/dsp/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /layout
----------------------------------------
/layout/load_user_layout (action, write-only)
        Description: Load existing user layout.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/layout/load_factory_layout (action, write-only)
        Description: Load existing factory layout.
        Input: {
                "index": <type: uint>
                        Range: 1..200
        }

/layout/save (action, write-only)
        Description: Store current configuration into selected user library slot index.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------
  /layout/library
----------------------------------------
/layout/library/user/<i>/index (read-only)
        Type: uint
        Range: 1..10

/layout/library/user/<i>/name (read-only)
        Description: User layout name.
        Type: string

/layout/library/factory/<i>/index (read-only)
        Type: uint
        Range: 1..200

/layout/library/factory/<i>/name (read-only)
        Description: Factory layout name.
        Type: string

----------------------------------------
  /layout/active
----------------------------------------
/layout/active/name (read-only)
        Description: Name of currently loaded layout.
        Type: string

/layout/active/index (read-only)
```

## LA7.16

```
        Description: Index of currently loaded layout.
        Type: uint

/layout/active/source (read-only)
        Description: Source of currently loaded layout.
        Type: enum
        Values: "none", "factory", "user", "configuration"

----------------------------------------
  /en54
----------------------------------------
/en54/aes/<i>/index (read-only)
        Type: uint
        Range: 1..1

/en54/aes/<i>/monitor (read-only)
        Type: boolean

/en54/stream/<i>/index (read-only)
        Type: uint
        Range: 1..16

/en54/stream/<i>/monitor (read-only)
        Type: boolean

----------------------------------------
  /en54/output/<i>/limits
----------------------------------------
/en54/output/<i>/limits/z_hf_min (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_hf_max (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_lf_min (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_lf_max (read-only)
        Type: decimal64

/en54/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.

        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"

/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/monitor/fuse_protect (read-only)
        Description: Fuseprotect indication (global flag).
        Type: enum
        Values: "ok", "limiting"

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
```

## LA7.16

```
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "ptp"

/clock/source/audio_stream (read-write)
        Description: AVB audio input stream used as clock source.
        Type: uint
        Range: 1..16

/clock/source/selected_ptp_clock (read-only)
        Description: PTPv2 clock used for mediaclock (redundancy only).
        Type: int
        Range: 0..1

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..16

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..96000

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..16

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..16

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
```

## LA7.16

```
          This is the stream format as it has been set by the Avdecc controller.
          Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

/avdecc/lock (read-only)
        Type: boolean

/avdecc/entity_id (read-only)
        Description: Entity ID of this AVB entity.
        Type: type_hex (pattern = 0x[0-9A-F]+)

----------------------------------------
  /hmi
----------------------------------------
/hmi/identify (read-write)
        Type: boolean

/hmi/intensity (read-write)
        Description: Display led or backlight intensity.
        Type: enum
        Values: "OFF", "LOW", "MEDIUM", "NORMAL", "HIGH"

/hmi/lock (read-write)
        Type: boolean

----------------------------------------
  /hmi/unit
----------------------------------------
/hmi/unit/delay (read-write)
        Type: enum
        Values: "MS", "SAMPLES", "METERS", "FEET"

/hmi/unit/temperature (read-write)
        Type: enum
        Values: "CELSIUS", "FAHRENHEIT"

----------------------------------------
  /ptp
----------------------------------------
/ptp/ptpv2_domain (read-write)
        Description: PTPv2 domain.
        Type: uint

----------------------------------------
  /ptp/primary
----------------------------------------
/ptp/primary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)
```

## LA12X

```
/ptp/primary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/primary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/primary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /ptp/secondary
----------------------------------------
/ptp/secondary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/secondary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/secondary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/secondary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"

----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"

/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
```

## LA12X

```
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"

/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean

----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
```

## LA12X

```
        Type: uint

/bridge/streams/used (read-only)
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /input/fallback
----------------------------------------
/input/fallback/test (action, write-only)
        Description: Trigger (test) fallback

----------------------------------------
  /input/fallback/aes
----------------------------------------
/input/fallback/aes/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/aes/enable (read-write)
        Description: Enable fallback feature for AES input
        Type: boolean

/input/fallback/aes/active (read-only)
        Description: Current fallback state
        Type: boolean

----------------------------------------
  /input/fallback/network
----------------------------------------
/input/fallback/network/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/network/enable (read-write)
        Description: Enable fallback feature
        Type: boolean

/input/fallback/network/active (read-only)
        Description: Current fallback state
        Type: boolean

----------------------------------------
```

## LA12X

```
  /input/source
----------------------------------------
/input/source/select (read-write)
        Description: Select input source
        Type: enum
        Values: "xlr", "network"

/input/source/active (read-only)
        Description: Active input source
        Type: enum
        Values: "xlr", "network"

----------------------------------------
  /input/xlr/ab
----------------------------------------
/input/xlr/ab/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/xlr/ab/active (read-only)
        Type: enum
        Values: "ana", "aes"

----------------------------------------
  /input/xlr/cd
----------------------------------------
/input/xlr/cd/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/xlr/cd/active (read-only)
        Type: enum
        Values: "ana", "aes"

----------------------------------------
  /routing
----------------------------------------
/routing/output/<i>/input/<i>/index (read-only)
        Type: uint
        Range: 1..8

/routing/output/<i>/input/<i>/enable (read-write)
        Description: Enable input channel.
        Type: boolean

/routing/output/<i>/input/<i>/invert (read-write)
        Description: Invert channel polarity.
        Type: boolean

/routing/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"
```

## LA12X

```
----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz",
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
        Range: 1..2

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/standby (read-write)
        Description: Standby mode
        Type: boolean

----------------------------------------
  /power/status
----------------------------------------
/power/status/smps (read-only)
        Type: boolean

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }
```

## LA12X

```
/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------
  /configuration/active
----------------------------------------
/configuration/active/index (read-only)
        Type: uint
        Range: 0..10

----------------------------------------
  /level/dsp
----------------------------------------
/level/dsp/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/dsp/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/dsp/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /layout
----------------------------------------
/layout/load_user_layout (action, write-only)
        Description: Load existing user layout.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/layout/load_factory_layout (action, write-only)
        Description: Load existing factory layout.
        Input: {
                "index": <type: uint>
                        Range: 1..200
        }

/layout/save (action, write-only)
        Description: Store current configuration into selected user library slot index.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------
  /layout/library
----------------------------------------
/layout/library/user/<i>/index (read-only)
        Type: uint
        Range: 1..10
```

## LA12X

```
/layout/library/user/<i>/name (read-only)
        Description: User layout name.
        Type: string

/layout/library/factory/<i>/index (read-only)
        Type: uint
        Range: 1..200

/layout/library/factory/<i>/name (read-only)
        Description: Factory layout name.
        Type: string

----------------------------------------
  /layout/active
----------------------------------------
/layout/active/name (read-only)
        Description: Name of currently loaded layout.
        Type: string

/layout/active/index (read-only)
        Description: Index of currently loaded layout.
        Type: uint

/layout/active/source (read-only)
        Description: Source of currently loaded layout.
        Type: enum
        Values: "none", "factory", "user", "configuration"

----------------------------------------
  /en54
----------------------------------------
/en54/aes/<i>/index (read-only)
        Type: uint
        Range: 1..2

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.
        Type: boolean

/en54/output/<i>/lf (read-only)
        Description: LF channels to be tested.
        Type: boolean

/en54/output/<i>/open_circuit_hf (read-only)
        Description: Speaker or cable disconnection (HF).
        Type: boolean

/en54/output/<i>/open_circuit_lf (read-only)
        Description: Speaker or cable disconnection (LF).
```

## LA12X

```
        Type: boolean

/en54/output/<i>/short_circuit_hf (read-only)
        Description: Speaker or cable short circuit (HF).
        Type: boolean

/en54/output/<i>/short_circuit_lf (read-only)
        Description: Speaker or cable short circuit (LF).
        Type: boolean

/en54/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/en54/input/<i>/monitor (read-only)
        Type: boolean

/en54/input/<i>/pilot_tone_error (read-only)
        Description: Pilot tone monitoring enabled but not detected.
        Type: boolean

/en54/enable (read-only)
        Description: Enable EN54 system monitoring.
        Type: boolean

/en54/options (read-only)
        Type: enum
        Values: "PILOT_TONE", "AES_LOCK", "AES_AUDIO", "SPEAKER", "STREAM_LOCK"

/en54/period (read-only)
        Description: The speaker check refresh period (in sec).
        The maximum period is limited to 60 seconds as defined by EN54-16.

        Type: uint
        Range: 1..58

/en54/state (read-only)
        Description: EN54 global error indication.
        Type: enum
        Values: "ok", "error"

----------------------------------------
  /en54/pilot_tone
----------------------------------------
/en54/pilot_tone/frequency (read-only)
        Description: Expected pilot tone frequency (in Hz). default = 21kHz
        Type: uint
        Range: 10..22000

/en54/pilot_tone/threshold (read-only)
        Description: Pilot tone detection threshold (in 0.1 dBFS). default = -60dBFs
        Type: int
        Range: -1200..0

/en54/pilot_tone/resolution (read-only)
        Description: Pilot tone frequency resolution (in Hz). default = 100Hz
        Type: uint
        Range: 10..1000

----------------------------------------
  /en54/siggen/hf
----------------------------------------
/en54/siggen/hf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/hf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26
```

## LA12X

```
/en54/siggen/hf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/hf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/hf/taps (read-only)
        Description: GFT size (samples).

/monitor/output/<i>/errors/dc_error (read-only)
        Type: boolean

/monitor/output/<i>/errors/init (read-only)
        Type: boolean

/monitor/output/<i>/errors/rail_overvoltage (read-only)
        Type: boolean

/monitor/output/<i>/errors/rail_undervoltage (read-only)
        Type: boolean

/monitor/output/<i>/errors/15v_overvoltage (read-only)
        Type: boolean

/monitor/output/<i>/errors/15v_undervoltage (read-only)
        Type: boolean

/monitor/output/<i>/errors/high_temperature (read-only)
        Type: boolean

/monitor/output/<i>/errors/over_temperature (read-only)
        Type: boolean

/monitor/output/<i>/errors/short_circuit (read-only)
        Type: boolean

/monitor/output/<i>/errors/hf (read-only)
        Type: boolean

/monitor/output/<i>/errors/under_impedance (read-only)
        Type: boolean

/monitor/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/monitor/output/<i>/clip (read-only)
        Description: Clip event.
        Type: boolean

/monitor/output/<i>/limit (read-only)
        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"

/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
```

## LA12X

```
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

/monitor/fuse_protect (read-only)
        Description: Fuseprotect indication (global flag).
        Type: enum
        Values: "ok", "limiting"

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-only)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "ptp"

----------------------------------------
  /clock/status/ptp
----------------------------------------
/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..96000

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean

----------------------------------------
  /avb/input
```

## LA12X

```
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..4

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..1

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

----------------------------------------------
  /avb/input/audio_stream/<i>/primary/status
----------------------------------------------
/avb/input/audio_stream/<i>/primary/status/report (read-only)
        Type: avb_input_status_report
        Values: "IDLE", "ERROR", "CONNECTING", "CONNECTED", "SYNC"

/avb/input/audio_stream/<i>/primary/status/error (read-only)
        Type: avb_input_status_error
        Values: "NONE", "TIMEOUT", "CONNECTION", "RESERVATION", "DATA"

/avb/input/audio_stream/<i>/primary/status/connection_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/primary/status/reservation_fault (read-only)
        Type: uint

-----------------------------------------
  /avb/input/audio_stream/<i>/secondary
```

## LA12X

```
-----------------------------------------
/avb/input/audio_stream/<i>/secondary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/secondary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

------------------------------------------------
  /avb/input/audio_stream/<i>/secondary/status
------------------------------------------------
/avb/input/audio_stream/<i>/secondary/status/report (read-only)
        Type: avb_input_status_report
        Values: "IDLE", "ERROR", "CONNECTING", "CONNECTED", "SYNC"

/avb/input/audio_stream/<i>/secondary/status/error (read-only)
        Type: avb_input_status_error
        Values: "NONE", "TIMEOUT", "CONNECTION", "RESERVATION", "DATA"

/avb/input/audio_stream/<i>/secondary/status/connection_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/secondary/status/reservation_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/index (read-only)
        Type: uint
        Range: 1..1

/avb/input/audio_stream/<i>/status (read-only)
        Description: Input state
        Type: stream_status
        Values: "IDLE", "ERROR", "WARNING", "OK"
```

## LA4X

### LA4X

```
----------------------------------------
  /info
----------------------------------------
/info/name (read-only)
        Description: Device name (e.g., LA4X)
        Type: string

/info/firmware_version (read-only)
        Description: Firmware package version.
        Type: string

/info/firmware_tag (read-only)
        Description: Firmware package tag
        Type: string

/info/firmware_date (read-only)
        Description: Firmware package date.
        Type: string

/info/serial (read-only)
        Description: Device serial number.
        Type: string

/info/mac (read-only)
        Description: MAC address of the network host.
        Type: type_mac (pattern = MAC address (e.g. 00:1B:92:12:34:EF))

/info/unit_name (read-write)
        Description: Unit name
        Type: string

/info/unit_name_auto (read-only)
        Description: TRUE if unit name is managed automatically.
        Type: boolean

/info/datetime (read-write)
        Description: Current system date and time (ISO-8601).
        Type: string

----------------------------------------
  /network/ip
----------------------------------------
/network/ip/select (action, write-only)
        Description: Select IP settings.
        Input: {
                "primary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                }
        }

----------------------------------------
  /network/ip/active/primary
----------------------------------------
/network/ip/active/primary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /hmi
----------------------------------------
/hmi/identify (read-write)
```

## LA4X

```
        Type: boolean

/hmi/intensity (read-write)
        Description: Display led or backlight intensity.
        Type: enum
        Values: "OFF", "LOW", "MEDIUM", "NORMAL", "HIGH"

/hmi/lock (read-write)
        Type: boolean

----------------------------------------
  /hmi/unit
----------------------------------------
/hmi/unit/delay (read-write)
        Type: enum
        Values: "MS", "SAMPLES", "METERS", "FEET"

/hmi/unit/temperature (read-write)
        Type: enum
        Values: "CELSIUS", "FAHRENHEIT"

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /input/fallback
----------------------------------------
/input/fallback/test (action, write-only)
        Description: Trigger (test) fallback

----------------------------------------
  /input/fallback/aes
----------------------------------------
/input/fallback/aes/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/aes/enable (read-write)
        Description: Enable fallback feature for AES input
        Type: boolean

/input/fallback/aes/active (read-only)
        Description: Current fallback state
        Type: boolean

----------------------------------------
  /input/xlr/ab
----------------------------------------
/input/xlr/ab/select (read-write)
        Type: enum
        Values: "ana", "aes"

/input/xlr/ab/active (read-only)
        Type: enum
        Values: "ana", "aes"
```

## LA4X

```
----------------------------------------
  /routing
----------------------------------------
/routing/output/<i>/input/<i>/index (read-only)
        Type: uint
        Range: 1..2

/routing/output/<i>/input/<i>/enable (read-write)
        Description: Enable input channel.
        Type: boolean

/routing/output/<i>/input/<i>/invert (read-write)
        Description: Invert channel polarity.
        Type: boolean

/routing/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz",
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
        Range: 1..1

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/standby (read-write)
        Description: Standby mode
```

## LA4X

```
        Type: boolean

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------

----------------------------------------
/configuration/active/index (read-only)
        Type: uint
        Range: 0..10

----------------------------------------
  /level/dsp
----------------------------------------
/level/dsp/input/<i>/index (read-only)
        Type: uint
        Range: 1..2

/level/dsp/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/dsp/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /layout
```

## LA4X

```
----------------------------------------
/layout/load_user_layout (action, write-only)
        Description: Load existing user layout.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/layout/load_factory_layout (action, write-only)
        Description: Load existing factory layout.
        Input: {
                "index": <type: uint>
                        Range: 1..200
        }

/layout/save (action, write-only)
        Description: Store current configuration into selected user library slot index.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

----------------------------------------
  /layout/library
----------------------------------------
/layout/library/user/<i>/index (read-only)
        Type: uint
        Range: 1..10

/layout/library/user/<i>/name (read-only)
        Description: User layout name.
        Type: string

/layout/library/factory/<i>/index (read-only)
        Type: uint
        Range: 1..200

/layout/library/factory/<i>/name (read-only)
        Description: Factory layout name.
        Type: string

----------------------------------------
  /layout/active
----------------------------------------
/layout/active/name (read-only)
        Description: Name of currently loaded layout.
        Type: string

/layout/active/index (read-only)
        Description: Index of currently loaded layout.
        Type: uint

/layout/active/source (read-only)
        Description: Source of currently loaded layout.
        Type: enum
        Values: "none", "factory", "user", "configuration"

----------------------------------------
  /en54
----------------------------------------
/en54/aes/<i>/index (read-only)

        Range: 1..1

/en54/aes/<i>/monitor (read-only)
        Type: boolean

----------------------------------------
  /en54/output/<i>/limits
```

## LA4X

```
----------------------------------------
/en54/output/<i>/limits/z_hf_min (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_hf_max (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_lf_min (read-only)
        Type: decimal64

/en54/output/<i>/limits/z_lf_max (read-only)
        Type: decimal64

/en54/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.
        Type: boolean

/en54/output/<i>/lf (read-only)
        Description: LF channels to be tested.
        Type: boolean

/en54/output/<i>/open_circuit_hf (read-only)
        Description: Speaker or cable disconnection (HF).
        Type: boolean

/en54/output/<i>/open_circuit_lf (read-only)
        Description: Speaker or cable disconnection (LF).
        Type: boolean

/en54/output/<i>/short_circuit_hf (read-only)
        Description: Speaker or cable short circuit (HF).
        Type: boolean

/en54/output/<i>/short_circuit_lf (read-only)
        Description: Speaker or cable short circuit (LF).
        Type: boolean

/en54/input/<i>/index (read-only)
        Type: uint
        Range: 1..2

/en54/input/<i>/monitor (read-only)
        Type: boolean

/en54/input/<i>/pilot_tone_error (read-only)
        Description: Pilot tone monitoring enabled but not detected.
        Type: boolean

/en54/enable (read-only)
        Description: Enable EN54 system monitoring.
        Type: boolean

/en54/options (read-only)
        Type: enum
        Values: "PILOT_TONE", "AES_LOCK", "AES_AUDIO", "SPEAKER"

/en54/period (read-only)
        Description: The speaker check refresh period (in sec).
        The maximum period is limited to 60 seconds as defined by EN54-16.

        Type: uint
        Range: 1..58

/en54/state (read-only)
        Description: EN54 global error indication.
        Type: enum
        Values: "ok", "error"
```

## LA4X

```
----------------------------------------
  /en54/pilot_tone
----------------------------------------
/en54/pilot_tone/frequency (read-only)
        Description: Expected pilot tone frequency (in Hz). default = 21kHz
        Type: uint
        Range: 10..22000

/en54/pilot_tone/threshold (read-only)
        Description: Pilot tone detection threshold (in 0.1 dBFS). default = -60dBFs
        Type: int
        Range: -1200..0

/en54/pilot_tone/resolution (read-only)
        Description: Pilot tone frequency resolution (in Hz). default = 100Hz
        Type: uint
        Range: 10..1000

----------------------------------------
  /en54/siggen/hf
----------------------------------------
/en54/siggen/hf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/hf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/hf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/hf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/hf/taps (read-only)
        Description: GFT size (samples).
        Type: uint
        Range: 64..32768

----------------------------------------
  /en54/siggen/lf
----------------------------------------
/en54/siggen/lf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/lf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/lf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/lf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/lf/taps (read-only)
```

## LA4X

```
        Description: GFT size (samples).

        Type: uint
        Range: 1..4

/monitor/output/<i>/clip (read-only)
        Description: Clip event.
        Type: boolean

/monitor/output/<i>/limit (read-only)
        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"

/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
```

## LA4X

```
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/temperature (read-only)
        Type: int

/monitor/fuse_protect (read-only)
        Description: Fuseprotect indication (global flag).
        Type: enum
        Values: "ok", "limiting"

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..65280

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean
```

  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"

----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"

/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"
```

## LA2Xi

```
/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean

----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
        Type: uint

/bridge/streams/used (read-only)
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
```

## LA2Xi

```
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description

        Type: uint
        Range: 1..4

/gpio/output/<i>/state (read-only)
```

## LA2Xi

```
        Description: Current output pin opened.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/function (read-write)
        Description: Select output pin function.
        Type: type_enum_gpo_func
        Values: "none", "state", "fault", "alive", "eth_link", "en54", "aes_lock", "stream_lock"

/gpio/output/<i>/state_select (read-write)
        Description: Select output pin state.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/alive_period (read-write)
        Description: Select alive signaling period (in sec).
        Type: uint
        Range: 1..60

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>

----------------------------------------
/layout/library/user/<i>/index (read-only)
        Type: uint
        Range: 1..10

/layout/library/user/<i>/name (read-only)
        Description: User layout name.
        Type: string

/layout/library/factory/<i>/index (read-only)
        Type: uint
        Range: 1..200

/layout/library/factory/<i>/name (read-only)
        Description: Factory layout name.
        Type: string

----------------------------------------
  /layout/active
----------------------------------------
/layout/active/name (read-only)
        Description: Name of currently loaded layout.
        Type: string

/layout/active/index (read-only)
        Description: Index of currently loaded layout.
        Type: uint
```

## LA2Xi

```
/layout/active/source (read-only)
        Description: Source of currently loaded layout.
        Type: enum
        Values: "none", "factory", "user", "configuration"

----------------------------------------
  /en54
----------------------------------------
/en54/aes/<i>/index (read-only)

/en54/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/en54/output/<i>/hf (read-only)
        Description: HF channels to be tested.
        Type: boolean

/en54/output/<i>/lf (read-only)
        Description: LF channels to be tested.
        Type: boolean

/en54/output/<i>/open_circuit_hf (read-only)
        Description: Speaker or cable disconnection (HF).
        Type: boolean

/en54/output/<i>/open_circuit_lf (read-only)
        Description: Speaker or cable disconnection (LF).
        Type: boolean

/en54/output/<i>/short_circuit_hf (read-only)
        Description: Speaker or cable short circuit (HF).
        Type: boolean

/en54/output/<i>/short_circuit_lf (read-only)
        Description: Speaker or cable short circuit (LF).
        Type: boolean

/en54/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/en54/input/<i>/monitor (read-only)
        Type: boolean

/en54/input/<i>/pilot_tone_error (read-only)
        Description: Pilot tone monitoring enabled but not detected.
        Type: boolean

/en54/enable (read-only)
        Description: Enable EN54 system monitoring.
```

## LA2Xi

```
        Type: boolean

/en54/options (read-only)
        Type: enum
        Values: "PILOT_TONE", "AES_LOCK", "AES_AUDIO", "SPEAKER", "STREAM_LOCK"

/en54/period (read-only)
        Description: The speaker check refresh period (in sec).
        The maximum period is limited to 60 seconds as defined by EN54-16.

        Type: uint
        Range: 1..58

/en54/state (read-only)
        Description: EN54 global error indication.
        Type: enum
        Values: "ok", "error"

----------------------------------------
  /en54/pilot_tone
----------------------------------------
/en54/pilot_tone/frequency (read-only)
        Description: Expected pilot tone frequency (in Hz). default = 21kHz
        Type: uint
        Range: 10..22000

/en54/pilot_tone/threshold (read-only)
        Description: Pilot tone detection threshold (in 0.1 dBFS). default = -60dBFs
        Type: int
        Range: -1200..0

/en54/pilot_tone/resolution (read-only)
        Description: Pilot tone frequency resolution (in Hz). default = 100Hz
        Type: uint
        Range: 10..1000

----------------------------------------
  /en54/siggen/hf
----------------------------------------
/en54/siggen/hf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000

/en54/siggen/hf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/hf/time (read-only)
        Description: Signal hold time (ms).
        Type: uint
        Range: 100..5000

/en54/siggen/hf/ramp (read-only)
        Description: Fade in/out time (ms).
        Type: uint
        Range: 10..1000

/en54/siggen/hf/taps (read-only)
        Description: GFT size (samples).
        Type: uint
        Range: 64..32768

----------------------------------------
  /en54/siggen/lf
----------------------------------------
/en54/siggen/lf/frequency (read-only)
        Description: Signal frequency (Hz).
        Type: uint
        Range: 10..22000
```

## LA2Xi

```
/en54/siggen/lf/gain (read-only)
        Description: Signal generator amplitude (dBFS).
        Type: type_dB
        Range: -120..-26

/en54/siggen/lf/time (read-only)
        Description: Signal hold time (ms).

/monitor/output/<i>/clip (read-only)
        Description: Clip event.
        Type: boolean

/monitor/output/<i>/limit (read-only)
        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"
```

## LA2Xi

```
/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-only)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "ptp"

----------------------------------------
  /clock/status/ptp
----------------------------------------
/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..96000

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean
```

## LA2Xi

```
/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..4

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..1

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

        Type: boolean

----------------------------------------
  /monitor/output/<i>/errors
----------------------------------------
/monitor/output/<i>/errors/cross_conduct (read-only)
        Type: boolean

/monitor/output/<i>/errors/dc_warning (read-only)
        Type: boolean

/monitor/output/<i>/errors/channel_error (read-only)
        Type: boolean

/monitor/output/<i>/errors/dc_error (read-only)
        Type: boolean

/monitor/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/monitor/output/<i>/clip (read-only)
        Description: Clip event.
        Type: boolean

/monitor/output/<i>/limit (read-only)
        Description: Limiter event.
        Type: boolean

/monitor/output/<i>/state (read-only)
        Description: Channel state.
        Type: enum
        Values: "ok", "protected", "disabled", "retry"

/monitor/output/<i>/temperature_state (read-only)
        Description: Output temperature state.
        Type: enum
        Values: "ok", "high", "over"

/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
```

## LA4 / LA8

```
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/temperature (read-only)
        Type: int

/monitor/fuse_protect (read-only)
        Description: Fuseprotect indication (global flag).
        Type: enum
        Values: "ok", "limiting"

----------------------------------------
  /control/dsp
----------------------------------------
/control/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/control/dsp/output/<i>/delay (read-write)
        Description: Output delay (in samples).
        Type: uint
        Range: 0..65280

/control/dsp/output/<i>/gain (read-write)
        Description: Output gain [-60..15]dB.
        Type: type_dB
        Range: -60.0..15.0

/control/dsp/output/<i>/volume (read-write)
        Description: Output volume [0..750].
        Type: uint
        Range: 0..750

/control/dsp/output/<i>/mute (read-write)
        Description: Output mute.
        Type: boolean

/control/dsp/output/<i>/invert (read-write)
        Description: Invert output polarity.
        Type: boolean
```

## P1

### P1

```
----------------------------------------
  /info
----------------------------------------
/info/name (read-only)
        Description: Device name (e.g., LA4X)
        Type: string

/info/firmware_version (read-only)
        Description: Firmware package version.
        Type: string

/info/firmware_tag (read-only)
        Description: Firmware package tag
        Type: string

/info/firmware_date (read-only)
        Description: Firmware package date.
        Type: string

/info/serial (read-only)
        Description: Device serial number.
        Type: string

/info/mac (read-only)
        Description: MAC address of the network host.
        Type: type_mac (pattern = MAC address (e.g. 00:1B:92:12:34:EF))

/info/unit_name (read-write)
        Description: Unit name
        Type: string

/info/unit_name_auto (read-only)
        Description: TRUE if unit name is managed automatically.
        Type: boolean

/info/datetime (read-write)
        Description: Current system date and time (ISO-8601).
        Type: string

----------------------------------------
  /network/redundancy
----------------------------------------
/network/redundancy/select (read-write)
        Type: boolean

/network/redundancy/active (read-only)
        Type: boolean

----------------------------------------
  /network/ip
----------------------------------------
/network/ip/select (action, write-only)
        Description: Select IP settings.
        Input: {
                "primary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                },
                "secondary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                }
        }

----------------------------------------
  /network/ip/active/primary
```

**P1**

```
----------------------------------------
/network/ip/active/primary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /network/ip/active/secondary
----------------------------------------
/network/ip/active/secondary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/secondary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/secondary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /avdecc
----------------------------------------
/avdecc/lock (read-only)
        Type: boolean

/avdecc/entity_id (read-only)
        Description: Entity ID of this AVB entity.
        Type: type_hex (pattern = 0x[0-9A-F]+)

----------------------------------------
  /hmi
----------------------------------------
/hmi/identify (read-write)
        Type: boolean

/hmi/intensity (read-write)
        Description: Display led or backlight intensity.
        Type: enum
        Values: "OFF", "LOW", "MEDIUM", "NORMAL", "HIGH"

/hmi/lock (read-write)
        Type: boolean

----------------------------------------
  /hmi/unit
----------------------------------------
/hmi/unit/delay (read-write)
        Type: enum
        Values: "MS", "SAMPLES", "METERS", "FEET"

/hmi/unit/temperature (read-write)
        Type: enum
        Values: "CELSIUS", "FAHRENHEIT"

----------------------------------------
  /hmi/option/confirm
----------------------------------------
/hmi/option/confirm/combined_edit (read-write)
        Type: boolean

/hmi/option/confirm/mute (read-write)
        Type: boolean

/hmi/option/confirm/unmute (read-write)
        Type: boolean

----------------------------------------
  /ptp
```

## P1

```
----------------------------------------
/ptp/ptpv2_domain (read-write)
        Description: PTPv2 domain.
        Type: uint

----------------------------------------
  /ptp/primary
----------------------------------------
/ptp/primary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/primary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/primary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/primary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /ptp/secondary
----------------------------------------
/ptp/secondary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/secondary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/secondary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/secondary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"

----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"
```

## P1

```
/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"

/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean
```

**P1**

```
----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
        Type: uint

/bridge/streams/used (read-only)
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /input/fallback/aes
----------------------------------------
/input/fallback/aes/group/<i>/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/aes/group/<i>/test (action, write-only)
        Description: Tigger (test) fallback feature

/input/fallback/aes/group/<i>/index (read-only)
        Type: uint
        Range: 1..2

/input/fallback/aes/group/<i>/enable (read-write)
        Description: Enable fallback feature
        Type: boolean

/input/fallback/aes/group/<i>/source (read-write)
        Description: Select fallback source
        Type: enum
        Values: "ana", "mic"

/input/fallback/aes/group/<i>/invalid (read-only)
```

**P1**

```
        Description: Current signal status
        Type: boolean

/input/fallback/aes/group/<i>/active (read-only)
        Description: Current fallback state
        Type: boolean

----------------------------------------
  /input/fallback/avb
----------------------------------------
/input/fallback/avb/group/<i>/clear (action, write-only)
        Description: Clear fallback state

/input/fallback/avb/group/<i>/test (action, write-only)
        Description: Tigger (test) fallback feature

/input/fallback/avb/group/<i>/index (read-only)
        Type: uint
        Range: 1..2

/input/fallback/avb/group/<i>/enable (read-write)
        Description: Enable fallback feature
        Type: boolean

/input/fallback/avb/group/<i>/source (read-write)
        Description: Select fallback source
        Type: enum
        Values: "ana", "mic", "aes"

/input/fallback/avb/group/<i>/invalid (read-only)
        Description: Current signal status
        Type: boolean

/input/fallback/avb/group/<i>/active (read-only)
        Description: Current fallback state
        Type: boolean

----------------------------------------
  /input/settings
----------------------------------------
/input/settings/ana/<i>/name (read-write)
        Description: Line name.
        Type: string

/input/settings/ana/<i>/mute (read-write)
        Description: Mute enable.
        Type: boolean

/input/settings/ana/<i>/polarity (read-write)
        Description: Output polarity.
        Type: type_enum_polarity
        Values: "NORMAL", "INVERTED"

/input/settings/ana/<i>/gain (read-write)
        Description: Output gain (dB).
        Type: type_dB
        Range: -60.0..15.0

/input/settings/aes/<i>/name (read-write)
        Description: Line name.
        Type: string

/input/settings/aes/<i>/mute (read-write)
        Description: Mute enable.
        Type: boolean

/input/settings/aes/<i>/polarity (read-write)
        Description: Output polarity.
        Type: type_enum_polarity
        Values: "NORMAL", "INVERTED"
```

## P1

```
/input/settings/aes/<i>/gain (read-write)
        Description: Output gain (dB).
        Type: type_dB
        Range: -60.0..15.0

/input/settings/avb/<i>/name (read-write)
        Description: Line name.
        Type: string

/input/settings/avb/<i>/mute (read-write)
        Description: Mute enable.
        Type: boolean

/input/settings/avb/<i>/polarity (read-write)
        Description: Output polarity.
        Type: type_enum_polarity
        Values: "NORMAL", "INVERTED"

        Type: uint
        Range: 1..2

/gpio/input/<i>/state (read-only)
        Description: Pin state.
        Type: type_enum_low_high
```

**P1**

```
        Values: "low", "high"

/gpio/input/<i>/function_low (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next", 
"load_config_previous"

/gpio/input/<i>/function_high (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "mute_set", "mute_clr", "mute_toggle", "load_config_a", "load_config_b", "load_config_next", 
"load_config_previous"

/gpio/input/<i>/config_slot_a (read-write)
        Description: Select slot of configuration A.
        Type: uint
        Range: 1..30

/gpio/input/<i>/config_slot_b (read-write)
        Description: Select slot of configuration B.
        Type: uint
        Range: 1..30

/gpio/input/<i>/error (read-only)
        Description: Input function error.
        Type: bits

----------------------------------------
  /gpio/output/<i>/eth_link_select
----------------------------------------
/gpio/output/<i>/eth_link_select/port_1 (read-write)
        Type: boolean

/gpio/output/<i>/eth_link_select/port_2 (read-write)
        Type: boolean

----------------------------------------
  /gpio/output/<i>/aes_lock_select
----------------------------------------
/gpio/output/<i>/aes_lock_select/aes_1 (read-write)
        Type: boolean

/gpio/output/<i>/aes_lock_select/aes_2 (read-write)
        Type: boolean

---------------------------------------------
  /gpio/output/<i>/audio_stream_lock_select
---------------------------------------------
/gpio/output/<i>/audio_stream_lock_select/sink_1 (read-write)
        Type: boolean

/gpio/output/<i>/audio_stream_lock_select/sink_2 (read-write)
        Type: boolean

---------------------------------------------
  /gpio/output/<i>/clock_stream_lock_select
---------------------------------------------
/gpio/output/<i>/clock_stream_lock_select/sink_1 (read-write)
        Type: boolean

/gpio/output/<i>/index (read-only)
        Type: uint
        Range: 1..2

/gpio/output/<i>/state (read-only)
        Description: Current output pin opened.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/function (read-write)
```

**P1**

```
        Description: Select output pin function.
        Type: type_enum_gpo_func
        Values: "none", "state", "power", "alive", "eth_link", "error", "aes_lock", "stream_lock"

/gpio/output/<i>/state_select (read-write)
        Description: Select output pin state.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/alive_period (read-write)
        Description: Select alive signaling period (in sec).
        Type: uint
        Range: 1..60

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..30

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..30
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..30
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..30
                "name": <type: string>
                        String lenght: 0..16
        }

/configuration/reset (action, write-only)
        Description: Reset current configuration.

----------------------------------------
  /configuration/active
----------------------------------------
/configuration/active/index (read-only)
        Type: uint
        Range: 0..30

/configuration/active/name (read-write)
        Type: string

/configuration/active/info (read-write)
        Type: string
```

**P1**

```
/configuration/active/modified (read-only)
        Description: Whether the current configuration is different from the saved one.
        Type: boolean

----------------------------------------
  /level/dsp
----------------------------------------
/level/dsp/output/<i>/index (read-only)
        Type: uint
        Range: 1..8

/level/dsp/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/ana
----------------------------------------
/level/ana/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/ana/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/ana/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/ana/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/aes
----------------------------------------
/level/aes/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/aes/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/aes/output/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/aes/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/avb
----------------------------------------
/level/avb/input/<i>/index (read-only)
        Type: uint
        Range: 1..8

/level/avb/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/avb/output/<i>/index (read-only)
        Type: uint
        Range: 1..8

/level/avb/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB
```

## P1

```
----------------------------------------
  /level/mic
----------------------------------------
/level/mic/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/level/mic/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/mpl
----------------------------------------
/level/mpl/input/<i>/index (read-only)
        Type: uint
        Range: 1..2

/level/mpl/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/gen
----------------------------------------
/level/gen/input/<i>/index (read-only)
        Type: uint
        Range: 1..1

/level/gen/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /level/mon
----------------------------------------
/level/mon/output/<i>/index (read-only)
        Type: uint
        Range: 1..2

/level/mon/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /monitor
----------------------------------------
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "dsp", "power", "reserved", "init", "hardware"

/monitor/humidity (read-only)
        Type: type_percent

/monitor/temperature (read-only)
        Type: int

----------------------------------------
  /monitor/probe
----------------------------------------
/monitor/probe/connected (read-only)
        Type: boolean

/monitor/probe/humidity (read-only)
```

**P1**

```
        Type: type_percent

/monitor/probe/temperature (read-only)
        Type: int

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/type (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "ptp"

/clock/source/audio_stream (read-write)
        Description: AVB audio input stream used as clock source.
        Type: uint
        Range: 1..2

/clock/source/selected_ptp_clock (read-only)
        Description: PTPv2 clock used for mediaclock (redundancy only).
        Type: int
        Range: 0..1

----------------------------------------
  /fan
----------------------------------------
/fan/id/<i>/error (read-only)
        Description: Report fan error.
        Type: boolean

/fan/id/<i>/ratio (read-only)
        Description: Report fan speed ratio.
        Type: type_percent

----------------------------------------
  /output/settings
----------------------------------------
/output/settings/ana/<i>/mux (read-write)
        Type: type_enum_out
        Values: "NONE", "ANA_1", "ANA_2", "ANA_3", "ANA_4", "AES_1", "AES_2", "AES_3", "AES_4", "AVB_1", "AVB_2",
"AVB_3", "AVB_4", "AVB_5", "AVB_6", "AVB_7", "AVB_8", "MIC_1", "MIC_2", "MIC_3", "MIC_4", "DSP_BUS_1", "DSP_BUS_2",
"DSP_BUS_3", "DSP_BUS_4", "DSP_CUE", "DSP_GEN", "DSP_BUS_5", "DSP_BUS_6", "DSP_BUS_7", "DSP_BUS_8", "MPL_L", "MPL_R"

/output/settings/ana/<i>/name (read-write)
        Description: Line name.
        Type: string

/output/settings/ana/<i>/mute (read-write)
        Description: Mute enable.
        Type: boolean

/output/settings/ana/<i>/polarity (read-write)
        Description: Output polarity.
        Type: type_enum_polarity
        Values: "NORMAL", "INVERTED"

/output/settings/ana/<i>/gain (read-write)
        Description: Output gain (dB).
        Type: type_dB
        Range: -60.0..15.0

/output/settings/aes/<i>/mux (read-write)
```

**P1**

```
        Type: type_enum_out
        Values: "NONE", "ANA_1", "ANA_2", "ANA_3", "ANA_4", "AES_1", "AES_2", "AES_3", "AES_4", "AVB_1", "AVB_2",
"AVB_3", "AVB_4", "AVB_5", "AVB_6", "AVB_7", "AVB_8", "MIC_1", "MIC_2", "MIC_3", "MIC_4", "DSP_BUS_1", "DSP_BUS_2",

        Type: enum
        Values: "WHITE", "PINK"

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..8

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

        Type: string

/info/firmware_date (read-only)
        Description: Firmware package date.
        Type: string

/info/serial (read-only)
        Description: Device serial number.
        Type: string

/info/mac (read-only)
        Description: MAC address of the network host.
        Type: type_mac (pattern = MAC address (e.g. 00:1B:92:12:34:EF))

/info/unit_name (read-write)
        Description: Unit name
        Type: string

/info/unit_name_auto (read-only)
        Description: TRUE if unit name is managed automatically.
        Type: boolean

/info/datetime (read-write)
        Description: Current system date and time (ISO-8601).
        Type: string

----------------------------------------
  /network/redundancy
----------------------------------------
/network/redundancy/select (read-write)
        Type: boolean

/network/redundancy/active (read-only)
        Type: boolean

----------------------------------------
  /network/ip
----------------------------------------
/network/ip/select (action, write-only)
        Description: Select IP settings.
        Input: {
                "primary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                },
                "secondary": {
                        "address": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "netmask": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>,
                        "gateway": <type: type_ip, pattern = IP address (e.g. 192.168.1.100)>
                }
        }

----------------------------------------
  /network/ip/active/primary
```

## LC16D

```
----------------------------------------
/network/ip/active/primary/address (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/primary/netmask (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/network/ip/active/secondary/gateway (read-only)
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

----------------------------------------
  /network/audio
----------------------------------------
/network/audio/select (read-write)
        Type: type_enum_audio_mode
        Values: "AVB", "AES67"

/network/audio/active (read-only)
        Type: type_enum_audio_mode
        Values: "AVB", "AES67"

----------------------------------------
  /avdecc
----------------------------------------
/avdecc/lock (read-only)
        Type: boolean

/avdecc/entity_id (read-only)
        Description: Entity ID of this AVB entity.
        Type: type_hex (pattern = 0x[0-9A-F]+)

----------------------------------------
  /hmi
----------------------------------------
/hmi/identify (read-write)
        Type: boolean

/hmi/intensity (read-write)
        Description: Display led or backlight intensity.
        Type: enum
        Values: "OFF", "LOW", "MEDIUM", "NORMAL", "HIGH"

----------------------------------------
  /ptp
----------------------------------------
/ptp/ptpv2_domain (read-write)
        Description: PTPv2 domain.
        Type: uint

----------------------------------------
  /ptp/primary
----------------------------------------
/ptp/primary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/primary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint
```

## LC16D

```
/ptp/primary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/primary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /ptp/secondary
----------------------------------------
/ptp/secondary/gm_id (read-only)
        Description: Clock ID of the PTP grandmaster.
        Type: type_hex (pattern = 0x[0-9A-F]+)

/ptp/secondary/priority1 (read-write)
        Description: PTP priority 1.
        Type: uint

/ptp/secondary/priority2 (read-write)
        Description: PTP priority 2.
        Type: uint

/ptp/secondary/as_path_length (read-only)
        Description: AS path length.
        Type: int

----------------------------------------
  /bridge/port/<i>/status
----------------------------------------
/bridge/port/<i>/status/clear_error (action, write-only)
        Description: Clear port error

/bridge/port/<i>/status/report (read-only)
        Description: Status of this port.
        Type: enum
        Values: "idle", "error", "warning", "ok"

/bridge/port/<i>/status/error (read-only)
        Description: Error status of this port.
        Type: enum
        Values: "none", "internal", "down", "pdelay"

/bridge/port/<i>/status/warning (read-only)
        Description: Warning status of this port.
        Type: enum
        Values: "none", "speed", "duplex"

----------------------------------------
  /bridge/port/<i>/link
----------------------------------------
/bridge/port/<i>/link/state (read-only)
        Description: Link state of this port.
        Type: enum
        Values: "down", "up"

/bridge/port/<i>/link/duplex (read-only)
        Description: Link duplex mode of this port.
        Type: enum
        Values: "half", "full"

/bridge/port/<i>/link/speed (read-only)
        Description: Link speed of this port.
        Type: enum
        Values: "10", "100", "1000"

----------------------------------------
  /bridge/port/<i>/rstp
----------------------------------------
/bridge/port/<i>/rstp/state (read-only)
```

## LC16D

```
        Description: RSTP state of this port.
        Type: enum
        Values: "disabled", "blocking", "forwarding", "learning"

/bridge/port/<i>/rstp/role (read-only)
        Description: RSTP role of this port.
        Type: enum
        Values: "disabled", "root", "designated", "alternate", "backup"

/bridge/port/<i>/rstp/tc_detected (read-only)
        Description: RSTP topology change detected on this port.
        Type: boolean

----------------------------------------
  /bridge/port/<i>/gptp
----------------------------------------
/bridge/port/<i>/gptp/capable (read-only)
        Description: Value of the 'asCapable' variable for this port.
        Type: boolean

/bridge/port/<i>/gptp/pdelay (read-only)
        Description: Peer delay.
        Type: uint

/bridge/port/<i>/gptp/pdelay_threshold (read-write)
        Description: gPTP peer delay threshold (in nanoseconds) on this port. Note: to disable the threshold, use
the value 0x7FFFFFFF.
        Type: uint

----------------------------------------
  /bridge/port/<i>/bandwidth
----------------------------------------
/bridge/port/<i>/bandwidth/max (read-only)
        Description: Maximum usable bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/bandwidth/used (read-only)
        Description: Currently used bandwidth (kbps) for AVB on this port.
        Type: uint

/bridge/port/<i>/index (read-only)
        Type: uint
        Range: 1..2

/bridge/port/<i>/enable (read-write)
        Description: Enable/disable port.
        Type: boolean

/bridge/port/<i>/sr_class_a_capable (read-only)
        Description: Value of the 'srCapable' variable for Class A for this port.
        Type: boolean

/bridge/port/<i>/sr_class_b_capable (read-only)
        Description: Value of the 'srCapable' variable for Class B for this port.
        Type: boolean

----------------------------------------
  /bridge/rstp
----------------------------------------
/bridge/rstp/enable (read-write)
        Description: Enable the Rapid Spanning Tree Protocol
        Type: boolean

----------------------------------------
  /bridge/streams
----------------------------------------
/bridge/streams/max (read-only)
        Description: Max number of registerable streams.
        Type: uint

/bridge/streams/used (read-only)
```

## LC16D

```
        Description: Number of currently registered streams.
        Type: uint

----------------------------------------
  /bridge/vlans
----------------------------------------
/bridge/vlans/max (read-only)
        Description: Max number of registerable vlans.
        Type: uint

/bridge/vlans/used (read-only)
        Description: Number of currently registered vlans.
        Type: uint

----------------------------------------
  /lldp
----------------------------------------
/lldp/port/<i>/chassis_id (read-only)
        Description: Current management address
        Type: string

/lldp/port/<i>/ip (read-only)
        Description: Current management address
        Type: type_ip (pattern = IP address (e.g. 192.168.1.100))

/lldp/port/<i>/system_desc (read-only)
        Description: System description
        Type: string

/lldp/port/<i>/port_desc (read-only)
        Description: System description
        Type: string

----------------------------------------
  /aes/input/<i>/status
----------------------------------------
/aes/input/<i>/status/clear (action, write-only)
        Description: Clear status error (lock).

/aes/input/<i>/status/report (read-only)
        Type: aes_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/aes/input/<i>/status/error (read-only)
        Type: aes_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "DATA", "SIGNAL"

/aes/input/<i>/status/warning (read-only)
        Type: aes_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /aes/input/<i>/format
----------------------------------------
/aes/input/<i>/format/rate (read-only)
        Type: aes_input_rate
        Values: "NONE", "INVALID", "32kHz", "44.1kHz", "48kHz", "64kHz", "88.2kHz", "96kHz", "128kHz", "176.4kHz",
"192kHz"

/aes/input/<i>/format/audio (read-only)
        Type: boolean

----------------------------------------
  /aes/input/<i>/src
----------------------------------------
/aes/input/<i>/src/enable (read-write)
        Type: boolean

/aes/input/<i>/index (read-only)
        Description: AES receiver index.
        Type: uint
```

## LC16D

```
        Range: 1..8

/aes/input/<i>/lock (read-only)
        Type: boolean

/aes/input/<i>/frequency (read-only)
        Type: uint

/aes/input/<i>/gain (read-write)
        Type: int
        Range: -120..120

----------------------------------------
  /power
----------------------------------------
/power/reboot (action, write-only)
        Description: Device reset (save system state and reboot).

/power/reset (action, write-only)
        Description: Reset device to factory default settings.

----------------------------------------
  /power/status
----------------------------------------
/power/status/poe/<i>/port (read-only)
        Type: uint
        Range: 1..2

/power/status/poe/<i>/state (read-only)
        Type: boolean

/power/status/mains (read-only)
        Type: boolean

  /gpio
----------------------------------------
/gpio/pin/<i>/index (read-only)
        Type: uint
        Range: 1..4

/gpio/pin/<i>/direction (read-write)
        Description: Pin direction.
        Type: enum
        Values: "input", "output"

/gpio/pin/<i>/state (read-only)
        Description: Pin state
        Type: boolean

/gpio/input/<i>/index (read-only)
        Type: uint
        Range: 1..4

/gpio/input/<i>/state (read-only)
        Description: Pin state.
        Type: type_enum_low_high
        Values: "low", "high"

/gpio/input/<i>/function_low (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "load_config_a", "load_config_b", "load_config_next", "load_config_previous"

/gpio/input/<i>/function_high (read-write)
        Description: Select input pin function.
        Type: type_enum_gpi_func
        Values: "none", "load_config_a", "load_config_b", "load_config_next", "load_config_previous"

/gpio/input/<i>/config_slot_a (read-write)
        Description: Select slot of configuration A.
```

## LC16D

```
        Type: uint
        Range: 1..10

/gpio/input/<i>/config_slot_b (read-write)
        Description: Select slot of configuration B.
        Type: uint
        Range: 1..10

/gpio/input/<i>/error (read-only)
        Description: Input function error.
        Type: bits

----------------------------------------
  /gpio/output/<i>/fault_select
----------------------------------------
/gpio/output/<i>/fault_select/eth_link (read-write)

        Type: uint
        Range: 1..4

/gpio/output/<i>/state (read-only)
        Description: Current output pin opened.
        Type: type_enum_open_closed
        Values: "open", "closed"

/gpio/output/<i>/function (read-write)
        Description: Select output pin function.
        Type: type_enum_gpo_func
        Values: "none", "state", "fault", "alive", "eth_link", "aes_lock", "stream_lock", "madi_lock"

/gpio/output/<i>/state_select (read-write)
        Description: Select output pin state.
        Type: type_enum_open_closed
        Values: "open", "closed"
```

## LC16D

```
/gpio/output/<i>/alive_period (read-write)
        Description: Select alive signaling period (in sec).
        Type: uint
        Range: 1..60

----------------------------------------
  /configuration
----------------------------------------
/configuration/library/<i>/index (read-only)
        Type: uint
        Range: 1..10

/configuration/library/<i>/name (read-only)
        Description: Configuration name.
        Type: string

/configuration/library/<i>/used (read-only)
        Description: Whether the configuration is used.
        Type: boolean

/configuration/load (action, write-only)
        Description: Load configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear (action, write-only)
        Description: Clear (delete) selected configuration.
        Input: {
                "index": <type: uint>
                        Range: 1..10
        }

/configuration/clear_all (action, write-only)
        Description: Clear (delete) all configurations.

/configuration/store (action, write-only)
        Description: Save current configuration.
        Input: {
                "index": <type: uint>,
                        Range: 1..10
                "name": <type: string>
                        String lenght: 0..16
        }

/configuration/reset (action, write-only)
        Description: Reset current configuration.

----------------------------------------
  /configuration/active
----------------------------------------
/configuration/active/index (read-only)
        Type: uint
        Range: 0..10

/configuration/active/name (read-write)
        Type: string

/configuration/active/info (read-write)
        Type: string

/configuration/active/modified (read-only)
        Description: Whether the current configuration is different from the saved one.
        Type: boolean

----------------------------------------
  /level/aes
----------------------------------------
/level/aes/input/<i>/index (read-only)

/level/madi/input/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

/level/madi/output/<i>/index (read-only)
        Type: uint
        Range: 1..64

/level/madi/output/<i>/peak (read-only)
        Description: Peak level (dB).
        Type: type_dB

----------------------------------------
  /monitor
----------------------------------------
/monitor/state (read-only)
        Description: Current monitor module state.
        Type: enum
        Values: "IDLE", "READY", "SHUTDOWN", "STANDBY", "ERROR", "STARTUP", "POWEROFF"

/monitor/error (read-only)
        Description: Startup error code.
        Type: enum
        Values: "ok", "reserved", "init", "hardware"

/monitor/temperature (read-only)
        Type: int

----------------------------------------
  /clock/source
----------------------------------------
/clock/source/locked (read-only)
        Description: Indicates if the currently applied clock source is locked.
        Type: boolean

/clock/source/status (read-only)
        Description: Indicates current clock source status.
        Type: enum
        Values: "stopped", "starting", "locking", "locked", "holdover", "freewheel", "fault"

/clock/source/audio_stream (read-write)
        Description: AVB audio input stream used as clock source.
        Type: uint
        Range: 1..16

/clock/source/selected_ptp_clock (read-only)
        Description: PTPv2 clock used for mediaclock (redundancy only).
        Type: int
        Range: 0..1
```

## LC16D

```
/clock/source/type (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "wc", "madi", "aes", "ptp"

/clock/source/type_when_gm_in_aes67 (read-write)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "wc", "madi", "aes"

/clock/source/type_current (read-only)
        Description: Type of the selected media clock source.
        Type: enum
        Values: "internal", "avb", "crf", "wc", "madi", "aes", "ptp"

----------------------------------------
  /clock/status/ptp
----------------------------------------
/clock/status/ptp/role (read-only)
        Description: PTP clock role for AES67
        Type: enum
        Values: "timeReceiver", "Grandmaster"

----------------------------------------
  /clock/status/madi
----------------------------------------
/clock/status/madi/status (read-only)
        Description: Clock validity.
        Type: enum
        Values: "invalid", "lock", "sync"

/clock/status/madi/frequency (read-only)
        Description: Clock frequency.
        Type: uint

----------------------------------------
  /clock/status/aes
----------------------------------------
/clock/status/aes/status (read-only)
        Description: Clock validity.
        Type: enum
        Values: "invalid", "lock", "sync"

/clock/status/aes/frequency (read-only)
        Description: Clock frequency.
        Type: uint

----------------------------------------
  /clock/status/wc
----------------------------------------
/clock/status/wc/status (read-only)
        Description: Clock validity.
        Type: enum
        Values: "invalid", "lock", "sync"

/clock/status/wc/frequency (read-only)
        Description: Clock frequency.
        Type: uint

----------------------------------------
  /clock/sample_rate
----------------------------------------
/clock/sample_rate/select (read-write)
        Description: Target sampling rate.
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/clock/sample_rate/active (read-only)
        Description: Current sampling rate.
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"
```

## LC16D

```
----------------------------------------
  /fan
----------------------------------------
/fan/id/<i>/error (read-only)
        Description: Report fan error.
        Type: boolean

/fan/id/<i>/ratio (read-only)
        Description: Report fan speed ratio.
        Type: type_percent

----------------------------------------
  /madi/input
----------------------------------------
/madi/input/frequency (read-only)
        Type: uint

----------------------------------------
  /madi/input/status
----------------------------------------
/madi/input/status/clear (action, write-only)
        Description: Clear status error (lock).

/madi/input/status/report (read-only)
        Type: madi_input_status_report
        Values: "IDLE", "ERROR", "WARNING", "OK"

/madi/input/status/error (read-only)
        Type: madi_input_status_error
        Values: "NONE", "LOCK", "INTERNAL", "CHANNELS", "RATE"

/madi/input/status/warning (read-only)
        Type: madi_input_status_warning
        Values: "NONE", "FREQUENCY", "PHASE"

----------------------------------------
  /madi/input/format
----------------------------------------
/madi/input/format/rate (read-only)
        Type: madi_input_rate
        Values: "NONE", "INVALID", "96kHz", "48kHz"

/madi/input/format/channels (read-only)
        Type: uint

----------------------------------------
  /madi/output/format
----------------------------------------
/madi/output/format/rate (read-only)
        Type: enum
        Values: "96kHz", "48kHz"

----------------------------------------
  /avb/input
----------------------------------------
/avb/input/mapping/<i>/input (read-only)
        Type: uint
        Range: 1..80

/avb/input/mapping/<i>/stream (read-write)
        Description: Sink providing data to the AVB input line.
        Type: uint
        Range: 0..16

/avb/input/mapping/<i>/channel (read-write)
        Description: Number of the stream's channel providing data to the AVB input line.
        Type: uint
        Range: 1..8

----------------------------------------
```

## LC16D

```
  /avb/input/audio_stream/<i>/format
----------------------------------------
/avb/input/audio_stream/<i>/format/raw (read-write)
        Description: Avdecc raw format.
            This is the stream format as it has been set by the Avdecc controller.
            Only an Avdecc controller can change this value, that's why the object is read-only here.

        Type: type_hex (pattern = 0x[0-9A-F]+)

/avb/input/audio_stream/<i>/format/type (read-write)
        Description: Stream type
        Type: enum
        Values: "AAF", "AM824"

/avb/input/audio_stream/<i>/format/rate (read-write)
        Description: Stream sampling frequency
        Type: type_enum_48_96
        Values: "96kHz", "48kHz"

/avb/input/audio_stream/<i>/format/channels (read-write)
        Description: Stream number of channels
        Type: uint

----------------------------------------
  /avb/input/audio_stream/<i>/primary
----------------------------------------
/avb/input/audio_stream/<i>/primary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/primary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
"waiting_start", "waiting_data", "data_error", "validating", "ready", "waiting_mclk", "locked"

----------------------------------------------
  /avb/input/audio_stream/<i>/primary/status
----------------------------------------------
/avb/input/audio_stream/<i>/primary/status/report (read-only)
        Type: avb_input_status_report
        Values: "IDLE", "ERROR", "CONNECTING", "CONNECTED", "SYNC"

/avb/input/audio_stream/<i>/primary/status/error (read-only)
        Type: avb_input_status_error
        Values: "NONE", "TIMEOUT", "CONNECTION", "RESERVATION", "DATA"

/avb/input/audio_stream/<i>/primary/status/connection_fault (read-only)
        Type: uint

/avb/input/audio_stream/<i>/primary/status/reservation_fault (read-only)
        Type: uint

-----------------------------------------
  /avb/input/audio_stream/<i>/secondary
-----------------------------------------
/avb/input/audio_stream/<i>/secondary/locked (read-only)
        Description: AVB input stream media locked.
        Type: boolean

/avb/input/audio_stream/<i>/secondary/state (read-only)
        Description: State of the sink.
        Type: avb_sink_stream_state
        Values: "not_bound", "waiting_talker", "connecting", "con_timeout", "con_error", "waiting_rsv", "rsv_error",
